

# Investigating Collaboration Tools for Sandy Supplemental Project HIWPP

Bonny Strong, ESRL/GSD

# Outline

1. Overview of HIWPP project
2. Collaboration needs for HIWPP

# What is HIWPP?

## High Impact Weather Prediction Project

A “Sandy Supplemental”  
project

Tim Schneider, ESRL/GSD  
HIWPP Project Manager

Hurricane Sandy, October 28, 2012; image captured by  
GOES-13 satellite.  
*NASA Earth Observatory image by Robert Simmon*

# HIWPP Objectives

In an unprecedented way, the Hurricane Sandy Supplemental funding provides an opportunity to bring together the nation's global weather modeling community and focus them on a common goal:

***developing the world's best  
medium-range weather forecast model  
by the end of the decade***

***to improve our time-zero to two-week prediction of nature's most dangerous storms such as hurricanes, floods, and blizzards, over the whole globe.***

# HIWPP Six-Point Strategy

1. Drive the current generation (hydrostatic) of global NWP models to max performance & resolution (10km-20km), to medium-range and beyond
2. In parallel, accelerate the development of the next generation (non-hydrostatic) of high-resolution (3km) medium-range global and nested NWP models
3. Utilize the latest hybrid assimilation techniques (4D-En-Var) and scale-aware physical parameterizations
4. Migrate models to newer and faster HPC technologies (MPFG/GPU)
5. Provide new tools to quickly access, visualize, and analyze massive amounts of gridded data
6. Engage with the weather community for feedback and an open process

# HIWPP at a Glance

## *“Just the facts...”*

- HIWPP is an OAR “Sandy Supplemental” Project
  - \$12.905M
  - *Public Law 113-2, the FY2013 Disaster Assistance Supplemental*
  - Funds expired 30 September 2014
  - 36 months to execute via contracts and grants
- 12 organizations, coast-to-coast:
  - AOML; ESRL/GSD; ESRL/PSD; GFDL;
  - NCEP/CPC; NCEP/EMC;
  - CICS-P; CIMAS; CIRA; CIRES;
  - NCAR; NRL
- Project is comprised of
  - 5 Subprojects
  - 19 Tasks

## *How are we going to do it?*

- Through partnerships...
  - HIWPP funding can help to unify and focus the NWP community
- Building on existing efforts
- And enhance & accelerate them
  - Drive the science to a higher technical readiness level

**Work Breakdown Structure**  
High Impact Weather Prediction Project (HIWPP)

**Project Manager:**  
Tim Schneider, ESRL

**Business Manager:**  
Ty Robinson, OWAQ

**3.1 Hydrostatic Global Models**

POC: S. Benjamin, ESRL

3.1.1 DA/Ens/Stoch Physics

3.1.2 Parameterization Dev

3.1.3 GFS

3.1.4 FIM

3.1.5 NAVGEM

**3.4 NMME Expansion**

POC: Jin Huang, NCEP

**3.5 Test Program**

POC: Bonny Strong, ESRL

3.5.1 Statistical Post Processing

3.5.2 Visualization via NEIS

3.5.3 Verification Methods

3.5.4 Real Time IT Operations

**3.3 Moving Hurricane Nest**

POC: S. Gopalakrishnan, AOML/  
V. Tallapragada, NCEP

**3.2 Non-Hydrostatic Global Models**

POC: J. Whitaker, ESRL

3.2.1 DA/Ens/Stoch Physics

3.2.2 Parameterization Dev

3.2.3 MPFG/GPU Optimization

3.2.4 NIM

3.2.5 MPAS

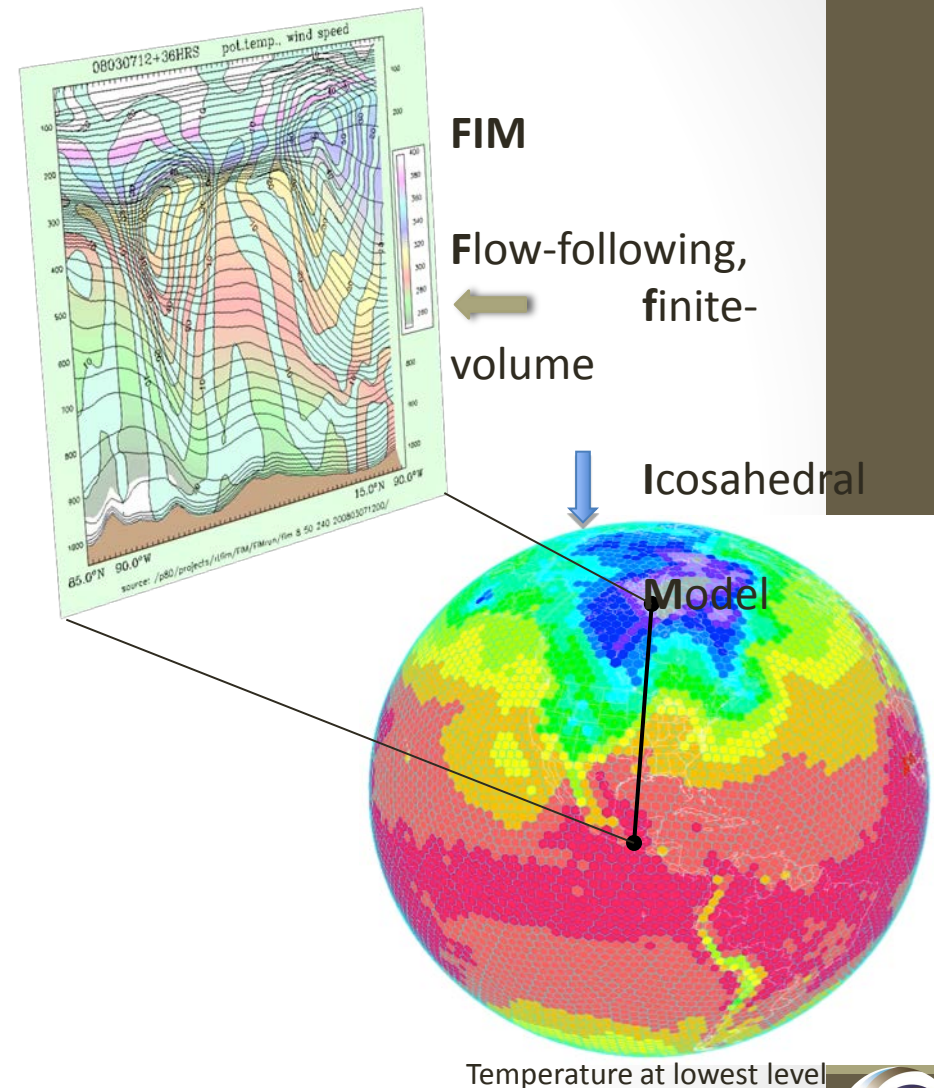

3.2.6 NMMB

3.2.7 HIRAM

3.2.8 NEPTUNE

# Goal: Hydrostatic Global Models

- Improve the current generation of global NWP models
  - Near-term impact: 1-3 years
- Work with three existing models: GFS; FIM; NAVGEM
  - Run at higher resolutions (sub-20km)
- Develop and implement scale-aware physical parameterizations
- Develop and implement new 4D-En-Var hybrid assimilation techniques
- Serves as baseline for the non-hydrostatic models

# Goal: Non-Hydrostatic Global Models

- Next generation of medium-range (0-16 days), global NWP models
  - By the end of the current decade (2020)
  - 3km resolution; convection and cloud resolving
- Thoroughly evaluate and test five existing dynamical cores
  - NIM
  - MPAS
  - NMMB
  - HiRAM
  - NEPTUNE
- Migrate one or more models to newer and faster Massively-Parallel, Fine-Grain (GPU) HPC technologies

# Goals: Moving Hurricane Nests and Seamless Long-range Weather Forecasts

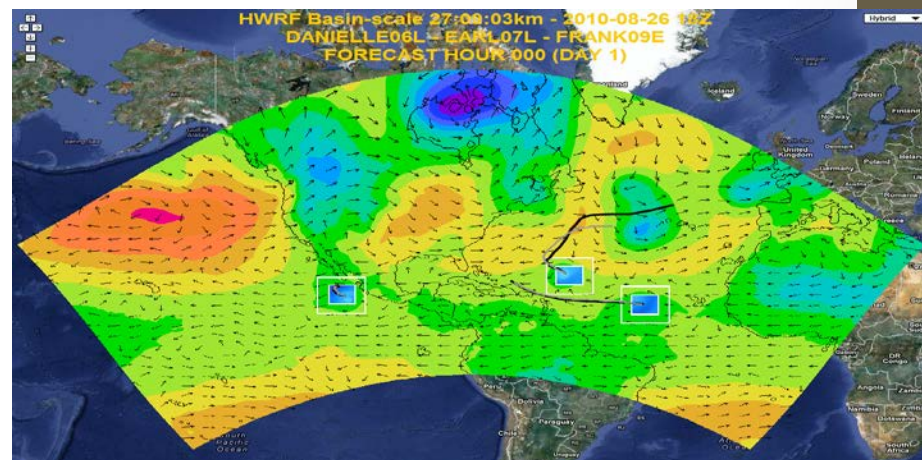

## Moving Hurricane Nest:

- Integrate HWRF into NMMB
  - fully two-way interactive moving nested, multi scale, non-hydrostatic modeling system using NMMB/NEMS framework
- Options to test HWRF nests in NMMB/NEMS framework with initial and boundary conditions from other models
- Proof of concept of global tropical cyclone model with multiple moveable nests placed around all tropical systems in the world and an open process

## NMME Expansion:

- Evaluate & establish the predictive capability of hurricanes & other high-impact weather events out to several months
- Leveraging activity to build a seamless suite of medium- to long-range weather forecasts

# Goal: Test Program

- **Statistical Post-Processing:**
  - Statistical post-processing of high-resolution HIWPP deterministic models and of coarser-resolution ensembles
- **NOAA Earth Information System (NEIS):**
  - A new tools to quickly access and visualize massive amounts of gridded data
- **Verification:**
  - Consistent and uniform assessments across all of the models

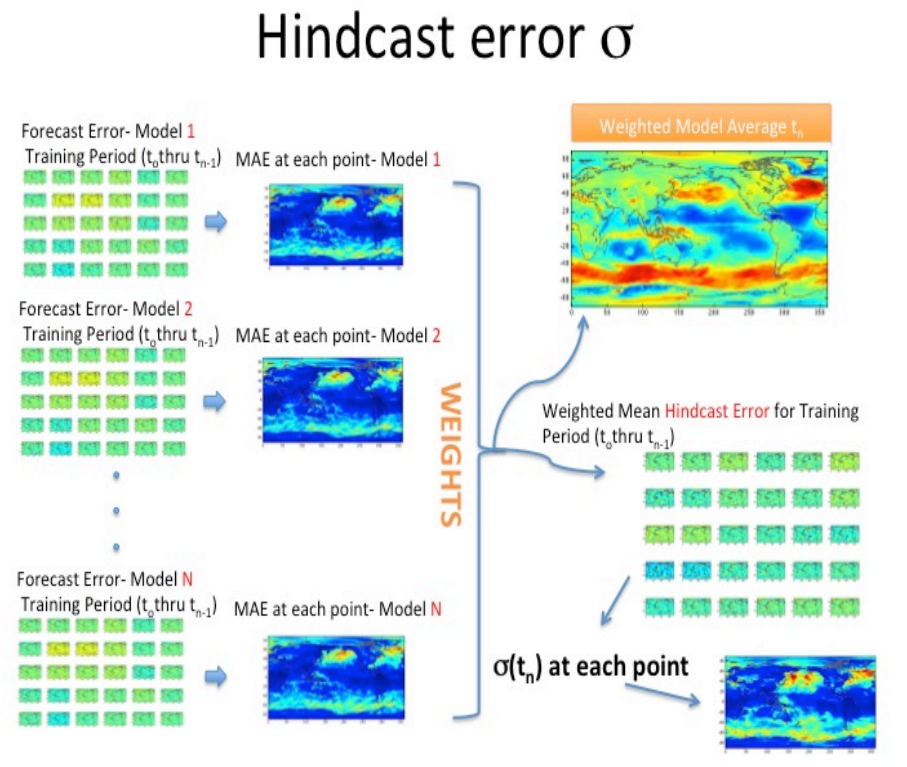

- **Real time IT Operations:**

- Getting data where it needs to be; when it needs to be there
- Building tools for Open Data Initiative

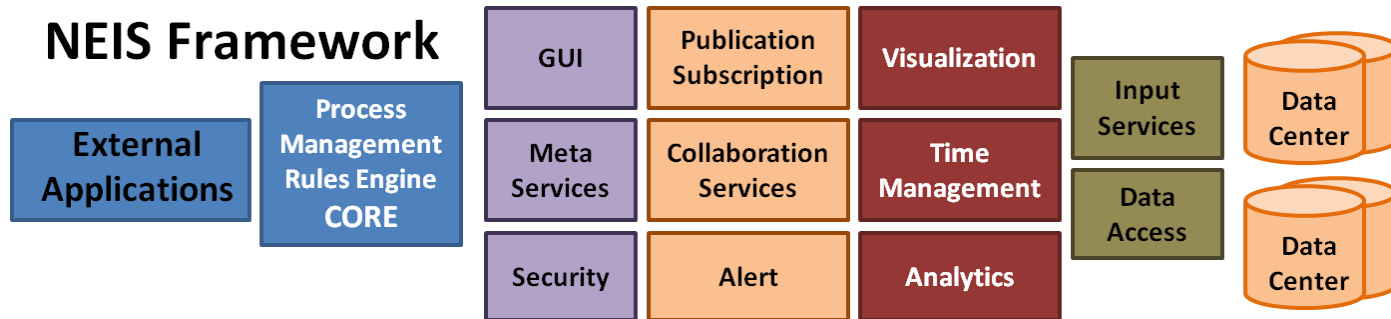

# Test Program: Statistical Post-Processing

- Investigation of experimental statistical post-processing techniques
- Inputs: HIWPP research models and available operational model data, both deterministic and ensemble
- Output: “best” model estimate

# NOAA Earth Information System (NEIS) -The Concept

NOAA Earth Information System (NEIS) is a framework of layered services designed to help NOAA's mission areas by facilitating the discovery, access, integration, and under-standing of all NOAA (past, present, and future).

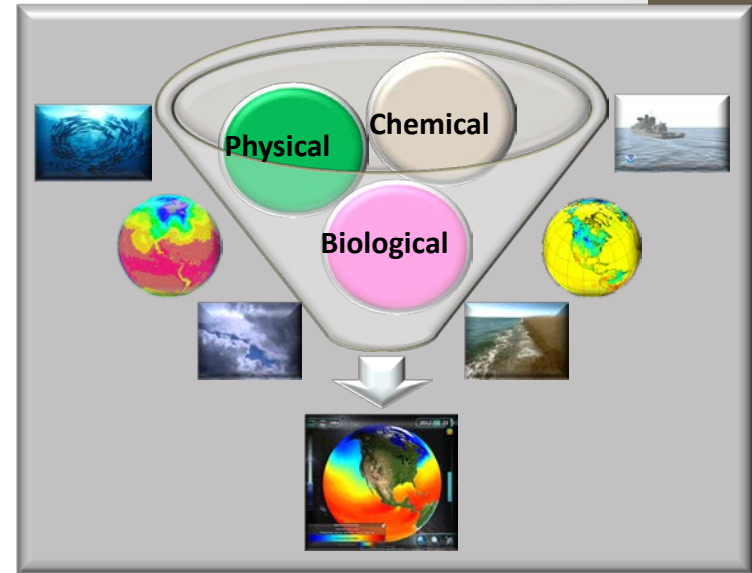

Framework provides the capability to answer questions that require data from different data sources regardless of format or location.

# Impacts

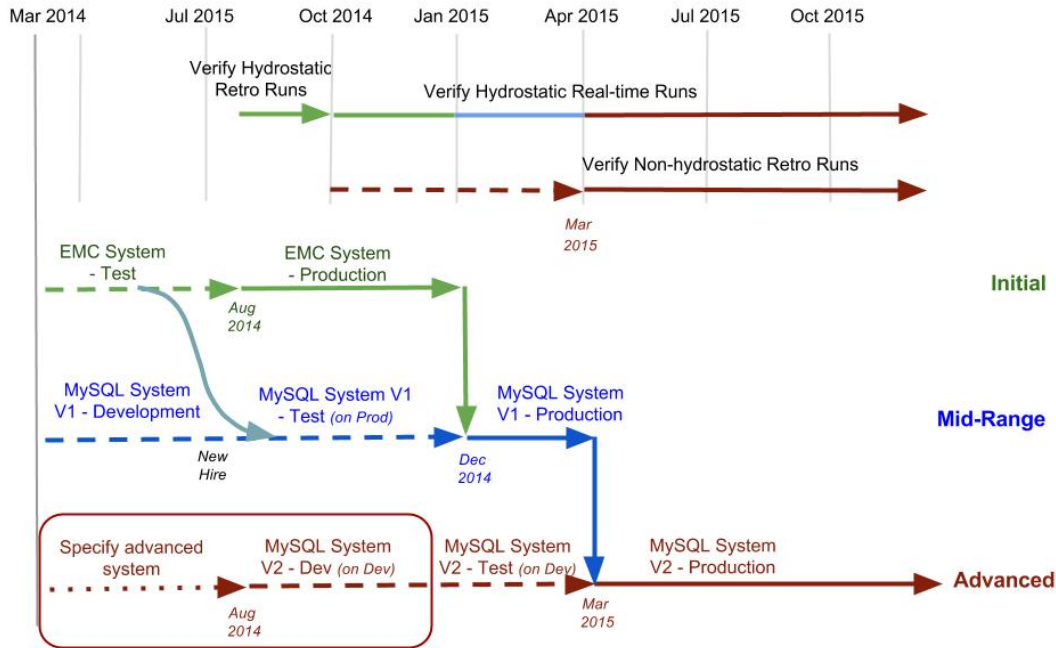

**Framework built towards standards, not data.**

**Important Because:**

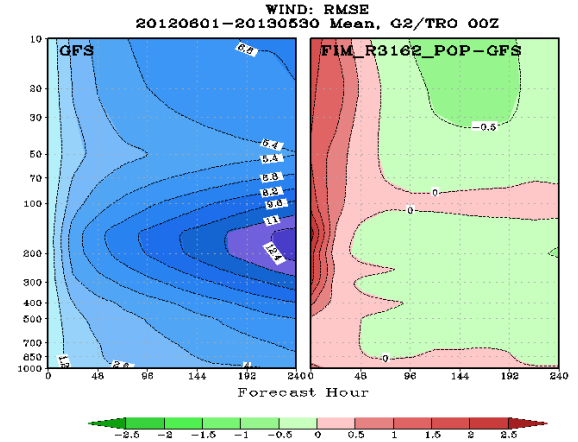

- NOAA and other data ready for action. Services model facilitates agile response to events. Services can be combined or reused quickly, upgraded or modified independently.
- Any data available through framework can be operated on or combined with other data. Integrated standardized formats and access.
- New and existing systems have access to wide variety of NOAA data. Any new data added, easily incorporated with minimal to no changes required.

# Verification System

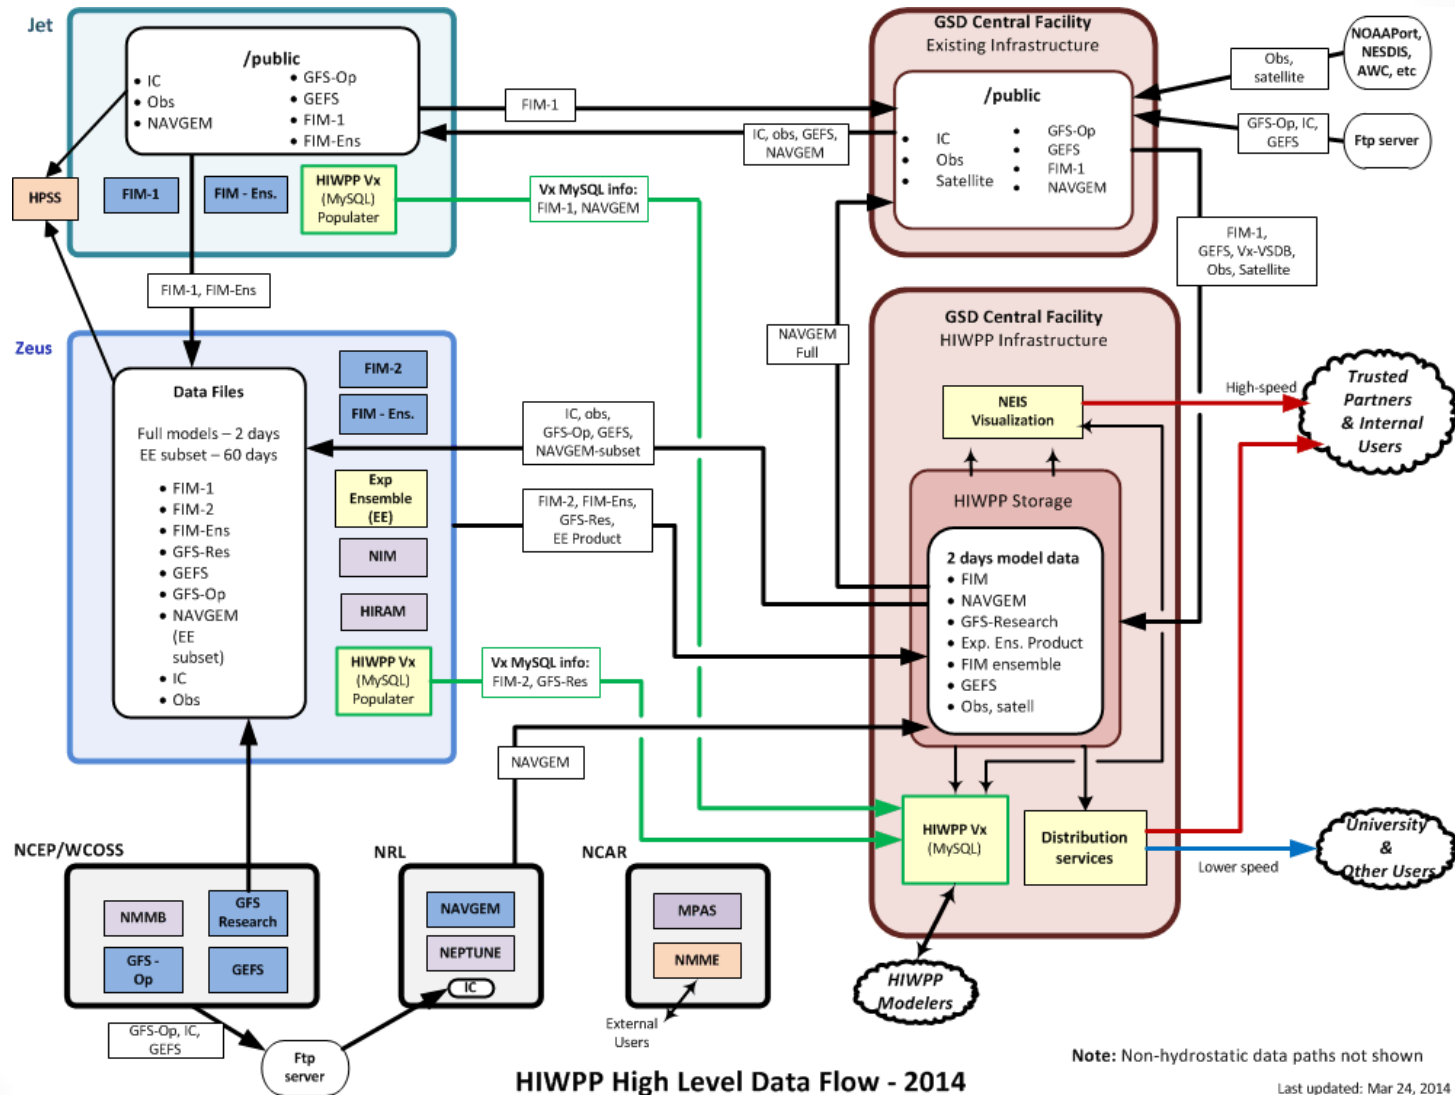

HIWPP Verification System Development Timeline

- Building on existing systems at ESRL/GSD and NCEP/EMC
- Developing new methods and observations for verifying global precipitation

Collaborative effort between ESRL/GSD and NCEP/EMC

# Real-time Operations: Data Flow Diagram

HIWPP High Level Data Flow - 2014

Note: Non-hydrostatic data paths not shown

Last updated: Mar 24, 2014

# HIWPP Open Data Initiative

## Summary Recommendations

Over a one-year period ending in June, 2013, over one hundred forty members of the public, private, academic weather communities came together to discuss priorities for significantly improving forecast capabilities. The community participated in a number of face-to-face meetings, telecons, and emc exchanges focusing on issues at the core of improving weather forecasts: computing—including big issues, modeling—including data assimilation, and observations. The overarching goal of all discussions was that the end users need to have better products that can support vital decisions.

Specifically, this group focused on changes that would make significant improvements on zero to ten day forecasts, with the understanding that many of these changes would result in improvements in the ten to thirty-day forecast as well. Recognizing that many end users receive their final products from private sector efforts, recognizing the critical role of research scientists in improving all aspects of forecasting, recognizing the critical role of NOAA in research and operation of forecasting, representatives of the communities gathered to critically examine options for significant improvements in forecasting.

Given the complexity of weather forecasting, a variety of views were presented on how to proceed as a community. Consensus, rather than complete agreement was sought and obtained on a number of fundamental issues. The process resulted in a set of recommendations which can most easily be summarized by the need for modeling and observations that can produce forecasts of unprecedented accuracy, with the computing power to support these efforts.

### Key Recommendations:

- Significantly improve the community's computing power for both development of new models and delivering accurate forecasts.
- Increase and focus efforts to both develop and run global models.
- Develop a coordinated national program to develop regional modeling techniques.
- Support active collaboration between public, private, and academic sectors with models particularly in their final stages of development.
- Embrace alternative data sets and alternative business models to acquire key measurements that can improve forecasting research and operations.
- Prioritize observational data and act on these prioritization efforts.
- Strengthen relationships within the public, private, academic, and user communities to assure economic and efficient development and use of forecasting capabilities.

This is a working document created by the AMS Forecast Improvement Group. This document is under review by the AMS community. This should not be considered a formal or approved statement from AMS.

## AMS Forecast Improvement Group

Key recommendations include:

*“Support active collaboration between public, private, and academic sectors with models particularly in their final stages of development”*

Real-time Research

HIWPP will support such collaboration through its Open Data Initiative

# HIWPP Open Data Initiative

- Provides an opportunity to engage in the development of the next generation of global medium-range weather models, and help to improve them
- Two components of HIWPP research will be made available to interested users:
  - ❑ NEIS advanced visualization tool with data access
  - ❑ Real-time model output, including
    - High resolution hydrostatic models: FIM, GFS, NAVGEM
    - Experimental ensembles
    - Statistical post-processing output
- Encourage users to provide feedback for model developers
- Available January 12, 2015

For announcements on access: [hiwpp.noaa.gov/engage.html](http://hiwpp.noaa.gov/engage.html)

# Collaboration

- Collaboration is key for this project
  - Large project
  - Geographically and organizationally diverse
  - Many interconnected work elements
- Areas of collaboration:
  - Project coordination
  - Project management
  - Software development
  - Open Data Initiative

# Project Coordination and Information Sharing

## *Collaboration amongst team members*

- Share info such as
  - Project plan
  - Presentations
  - Other key documents
  - Team members and contact info
  - Milestones and status
  - Research results
- Coordination
  - Meetings
  - Reports
- Model intercomparison information

# Project Management

*Collaboration between management and team*

- Tracking milestones
- Tracking issues and actions
- Gantt charts

# Open Data Initiative

## *Collaboration with public*

- User authentication
- User instructions, documentation, and support
- User feedback

### How To Access NEIS and Data

#### NOAA Earth Information System™ (NEIS)

NEIS is an advanced visualization system that displays HIWPP model data along with other key weather forecasting data sets.

Access to NEIS [is found here](#).

#### Real-time Model Data

Numerical output data for the HIWPP research models is available by a THREDDS service that permits web-based accessed of full or sub-sets of available model data.

Access to real-time data [is found here](#).

#### Additional Information

<b>FAQ</b>	A list of frequently asked questions <a href="#">is available here</a> .
<b>Model Descriptions</b>	Additional information about the available models <a href="#">is available here</a> .
<b>Status</b>	Current informaiton about systems and data feeds status is found on this web page (sample web page)
<b>Support:</b>	For additional assistance, please email <a href="mailto:hiwpp-support@noaa.gov">hiwpp-support@noaa.gov</a>
	To report an issue or problem with NEIS, please use this <a href="#">form</a> .
<b>Feedback:</b>	To provide feedback to model developers, go to this <a href="#">page</a>

# Collaboration Tools – CoG

## CoG (Community of Governance)

- Initially used in the project based on modelers experience using it for DCMIP
- NOAA's NESII team, headed by Cecelia DeLuca, has worked with HIWPP to develop new features
- Has worked well for project coordination internally

The screenshot shows the HIWPP internal website. At the top, there is a header with the NOAA logo and text: "National Oceanographic and Atmospheric Administration Earth System Research Laboratory" and "Welcome to the Earth System Grid Federation. You are at the NOAA ESRL ESGF-CoG node." The ESGF logo is also present. Below the header is a navigation bar with links: Home, About Us, Governance, Resources, Contact Us. The main content area is titled "HIWPP Internal - For Project Team Members" and includes a sidebar with navigation links: HIWPP\_Internal, Home, Project Info (Group Emails, Calendar/Important Dates, CoG Tutorial, Work Breakdown Structure), Project Meetings (Sep 2014, May 2014, Feb 2014), Project Documents (Project Report for Year 1, Project Plan, Edit Site Index), Visitors (List All News, List All Files), Members (Publish News, Add Page, Add File, Add Resource), and Administrators (List Pending Users, List Current Users, List ESGF Data Groups). The main content area contains text: "For Project Meetings, Group Email names, and other important project info: see the boxes along the left." and "Main HIWPP Website: hiwpp.noaa.gov". Below this is a section for "Go To Subprojects (team members only):" with a list of subprojects: Hydrostatic Global Models, Non-Hydrostatic Global Models, Moving Hurricane Nest, NMME, and Test Program. There is also a "CoG Tutorials:" section with links: HIWPP CoG Getting Started Tutorial, How to Add Files and Resources for HIWPP, and Getting your browser to accept the ESGF certificate used with OpenID. At the bottom, there is a footer with "Last Update: Oct. 2, 2014, 9:11 a.m. by Sylvia Murphy" and links for "Update Page", "Add File", and "Add Child Page".

# Collaboration Tools – ESGF

- **ESGF (Earth System Grid Federation)**
  - Mechanism for user authentication with OpenID
  - Serving HIWPP real-time data through a THREDDS service in the ESGF network
  - Mechanism for metadata

# Collaboration Tools – VLab

- Became aware of VLab following seminar by Ken Sperrow at ESRL
- For HIWPP:
  - Project management tools
  - Software development tools
    - Shared development between ESRL/GSD and NCEP/EMC
  - Forums for user feedback
- HIWPP needs to support users outside NOAA
  - Partners in project
  - Public for Open Data Initiative
- Integration of CoG/ESGF and VLab features?
  - OpenID

# Questions?

# Thank You!

ADDITIONAL SLIDES

# Structure: HIWPP Partnerships

Organization	Role/ Expertise	Notes
NOAA OAR/Laboratories	Applied R&D expertise (model development, high resolution nesting, physics, statistical post-processing, new data assimilation); verification; HIWPP data & visualization infrastructure; R2O	AOML, ESRL/GSD, ESRL/PSD, GFDL
NOAA NWS/NCEP	Operational numerical weather prediction and model development (GFS, NMMB, NAEFS, physics, data assimilation); verification, R2O	EMC; CPC
NOAA Cooperative Institutes	Academic and applied R&D in partnership with NOAA labs and centers	CICS-P, CIMAS, CIRA, CIRES
NSF/UCAR	R&D model development of non-hydrostatic model (MPAS); NMME data system	NCAR
Navy	R&D and operational modeling with NAVGEM (hydrostatic) & NUMA/NEPTUNE (non-hydrostatic)	NRL
Weather Enterprise	Interface with public perceptions and commercial needs, and academia; evaluation and feedback	HIWPP Open Data Users, AMS community (FIG)

# Quick Dive: HIWPP Hydrostatic Models

Model	Agency	Resolution (at 40° Lat.)	Initial Output Freq. & Resolution		Vertical Levels	NEMS ready	Initial Condit.	Notes
<b>FIM</b> Flow-following, finite-volume Icosahedral Model	ESRL/GSD	15km to 16day (10 km in future)	1 hr	1/8°	64	Y	GFS T1534	Icosahedral grid; isentropic sigma vertical coordinates; finite volume core GFS 2012 (w/updates) physics;
<b>GFS</b> Global Forecast System	NCEP	13km to 10 days 27km to 16 days	1 hr (0-12 hrs) 3 hrs (12+ hrs)	1/4°	64	Y	GFS T1534	Spectral core (spherical harmonic basis functions w/transformation to a Gaussian grid); vertical sigma pressure hybrid coordinate; GFS 2014 physics;
<b>NAVGEN</b> Navy Global Environmental Model	Navy	25km	3 hrs	1/4°	64	N	GFS T1534	semi-Lagrangian, semi-implicit core; vertical sigma pressure hybrid coordinate ; NAVGEN physics package

# Quick Dive: HIWPP Non-Hydrostatic Models

Model	Organization	Characteristics
<b>HiRAM</b> High Resolution Atmospheric Model	GFDL	Finite-volume dynamical core on a cubed-sphere grid. Developed as a global climate model, with capability to simulate statistics of tropical storms; parameterized convection helps the resolved scale convection, parameterization of shallow convection by Bretherton et. al. (2004)
<b>MPAS</b> Model for Prediction Across Scales	NCAR	Comprised of geophysical fluid-flow solvers that use spherical centroidal Voronoi tessellations (nominally hexagons) to tile the globe and C-grid staggering of the prognostic variables; supports non-uniform horizontal meshes and/or nests; terrain following height coordinate or hybrid coordinate relaxed at constant height. Advanced WRF physics package
<b>NEPTUNE</b> Navy Environmental Prediction sysTem Utilizing NUMA corE	Navy	Based on NUMA (Non-hydrostatic Unified Model for the Atmosphere), a spectral element/discontinuous Galerkin dynamical core; uses cubed-sphere grid; adaptive mesh refinement under development
<b>NIM</b> Non-hydrostatic Icosahedral Model	ESRL/GSD	Multi-scale model based on 3D finite-volume solver. Vertical coordinate system is physical heights. GFS and WRF physics options. Evolving from the FIM, NIM was designed for and is currently being tested on massively parallel fine grain computers (GPU)
<b>NMMB</b> Non-hydrostatic Multi- Model on B-Grid	NCEP	Based on NEMS framework; global versions uses lat-long grid. Horizontal differencing preserves properties of differential operators and conserves energy and enstrophy; 1-way and 2-way nesting supported; WRF NMM's physics

# Key HIWPP Milestones

<b><u>Test Program:</u></b> New hardware purchased, installed, and tested	6/30/14
<b><u>Hydrostatic Global Models:</u></b> Real-time research high-resolution runs of hydrostatic models begin; real-time cycling of 4D-En-Var begins; initial verification system in place	10/1/14
<b><u>Non-Hydrostatic Global Models:</u></b> Idealized test cases for non-hydrostatic models are completed	10/1/14
<b><u>Test Program:</u></b> NEIS (visualization) version 1 completed including Experimental Ensemble output; real-time data distribution system to Trusted Partners in place	10/1/14
<b><u>Moving Hurricane Nests:</u></b> Preliminary tests of hurricane nests within a research version of NMMB completed	12/30/14
<b><u>NMME Expansion:</u></b> Evaluations of NMME-based hurricane seasonal outlook completed	1/31/15
<b><u>Test Program:</u></b> Advanced verification system with new capabilities completed	3/30/15
<b><u>Hydrostatic Global Models:</u></b> Report on hydrostatic real-time test results submitted to journal	9/30/15
<b><u>NMME Expansion:</u></b> Evaluation of NMME-based severe weather environmental factors completed	9/30/15
<b><u>Test Program:</u></b> NEIS version 2 completed	9/30/15
<b><u>Non-Hydrostatic Global Models:</u></b> Completion of retrospective forecasts for non-hydrostatic models and report on all testing results. Selection of 1-2 models for porting to MPFG	10/30/15
<b><u>Moving Hurricane Nests:</u></b> Near real-time demo of multi-nested NMMB/NEMS model for hurricanes and report	12/30/15
<b><u>Non-Hydrostatic Global Models:</u></b> Optimization of code for selected non-hydrostatic model/s on new MPFG system completed; ready for runs on new system in March 2016	3/30/16
