

## **DESI 3.0**

Travis Wilson (NOAA/OAR/ESRL/GSL/WIDS, Boulder, CO)

The Dynamic Ensemble-based Scenarios for IDSS (DESI) team is gearing up for our next major release, DESI version 3.0, scheduled for late October. During our VLab presentation we will delve into the array of new features set to enhance our platform. These additions include but are not limited to a new sounding viewer, video generator, data layers controls, particle flow, model status page, joint and neighborhood probabilities, data smoothing, maps, new datasets, and new fields. In addition, we will also cover some existing features and offer a glimpse into what lies ahead for DESI in 2024.
