

## **Near Storm Environmental Awareness (NSEA) Project**

David Hotz (NOAA/NWS/SR/MRX, Morristown, TN)

Near Storm Environmental Awareness (NSEA) project goals are to develop more comprehensive tool(s) that have some of the following characteristics: Allows for greater interaction between the latest remote sensing (radar and satellite) characteristics and NSE, greater flexibility to change the input into the environmental analysis, and ability to easily monitor numerous environmental parameters quickly to spin-up and maintain situational awareness before and during a severe weather event. This presentation will also discuss the on-going coordination between the NSEA Project Team/OPG to prepare to the OPG Evaluation in May and June 2017.
