Results from the OPG Hosted Probabilistic "Think Tank"

John Brost (NOAA/NWS/STI/OPG, Kansas City, MO)

I will discuss the reasoning (background), design, and outcomes for the probabilistic Think Tank hosted by the OPG. Our think tank was comprised of 12 subject matter experts who spent 4 days brainstorming tools, methods, and workflows for a probabilistic operational environment. The OPG intends to test the ideas in FY23 and subsequent years. I will spend a majority of the time talking through the workflows designed by the participants and describe how the OPG plans to test these workflows in coming years.
