

## **Radar Application Update**

Paul Kirkwood (NOAA/NWS/SR/SRH/STSD/TIB, Fort Worth, TX), Brian Miretzky (NOAA/NWS/AFS/AFS1/AFS13, Silver Spring, MD), Dr. Danielle Nagele (NOAA/NWS/AFS/AFS2/AFS21, Silver Spring, MD), and Nipa Parikh (NOAA/NWS/DISS, Silver Spring, MD)

In Dec. 2020 a new NWS Radar Application [radar.weather.gov](https://radar.weather.gov) was rolled out publicly. Many issues arose that caused problems for users. Some fixes occurred over time and when Ken Graham become new NWS director, he made it a top priority to fix permanently. A major fix was put in place between Summer and Fall 2022. There is another set of changes planned for Summer 2023 and then the hope is this application will provide radar data to the public for years to come. Future plans and lessons learned will also be presented.
