Running UFS on the Cloud

Arun Chawla, Jacob Carley, James Abeles (NOAA/NWS/NCEP/EMC, College Park, MD), and Rajendra Panda (NOAA/NWS/NCEP/NCO, College Park, MD)

NOAA is developing the Regional Rapid Forecast System (RRFS) for doing convective scale ensemble forecasts for the North American Region. This system will use the UFS model and will replace all our current mesoscale models. In this project we are using cloud resources to advance the science of the system. This is a test case to see if cloud resources can be used to develop modeling systems for operations.
