Toolsets and Diagnostics

NEMSfv3gfs Forecast System Training and Tutorial
12-14 June, 2018

Toolsets

grid generation

mosaics

topography filter

re-gridding / re-mapping

distributed file combiner

Horizontal Grid Generation

make_hgrid

Generate different types of horizontal grids

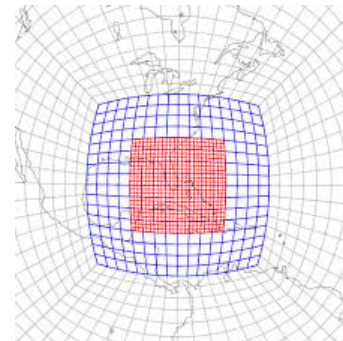

cubed-sphere

regular lat-lon

tripolar

Can create stretched grids and nests for cubed-sphere

Grid orientation is variable

Result is expressed as a *supergrid*

Supergrid Representation

- - grid box vertex (B-Grid)
- - upper-lower face mid-point
- - left-right face mid-point
- - grid box centroid (A-Grid)

Supergrid vs Model Grid

Supergrid is defined by the vertices, centroids, and face mid-points

4 vertices

1 centroid

4 face mid-points

Grid boxes are bounded by the vertices

Model grid is defined by the centroids only

For a model grid size (n_i, n_j) , the supergrid size is $(2*n_i+1, 2*n_j+1)$

The graph on the left has 4 model grid boxes (2x2) and the supergrid size is (5x5)

The (i,j) index representation in the image corresponds to the points defined in the supergrid

Solo Mosaic

make_solo_mosaic

Generates mosaic information about component grid

tripolar, cubed-sphere, and torus support

Includes:

- list of tile files

- list of contact region by index and contact type

Renamed to *grid_spec.nc* when running component models (i.e. solo ocean, atmos-only, land-only, etc.)

Solo Mosaic

cubed-sphere contact information

```
contacts =                                     contact_index =
"C192_mosaic:tile1::C192_mosaic:tile2",      "384:384,1:384::1:1,1:384",
"C192_mosaic:tile1::C192_mosaic:tile3",      "1:384,384:384::1:1,384:1",
"C192_mosaic:tile1::C192_mosaic:tile5",      "1:1,1:384::384:1,384:384",
"C192_mosaic:tile1::C192_mosaic:tile6",      "1:384,1:1::1:384,384:384",
"C192_mosaic:tile2::C192_mosaic:tile3",      "1:384,384:384::1:384,1:1",
"C192_mosaic:tile2::C192_mosaic:tile4",      "384:384,1:384::384:1,1:1",
"C192_mosaic:tile2::C192_mosaic:tile6",      "1:384,1:1::384:384,384:1",
"C192_mosaic:tile3::C192_mosaic:tile4",      "384:384,1:384::1:1,1:384",
"C192_mosaic:tile3::C192_mosaic:tile5",      "1:384,384:384::1:1,384:1",
"C192_mosaic:tile4::C192_mosaic:tile5",      "1:384,384:384::1:384,1:1",
"C192_mosaic:tile4::C192_mosaic:tile6",      "384:384,1:384::384:1,1:1",
"C192_mosaic:tile5::C192_mosaic:tile6" ;     "384:384,1:384::1:1,1:384" ;
```

tri-polar contact information

```
contacts =                                     contact_index =
"ocean_mosaic:tile1::ocean_mosaic:tile1",    "2880:2880,1:2160::1:1,1:2160",
"ocean_mosaic:tile1::ocean_mosaic:tile1" ;    "1:1440,2160:2160::2880:1441,2160:2160" ;
```

Coupled Mosaic

make_coupler_mosaic

Generates three(3) exchange grids for the FMS coupler
fluxes between atmosphere and surface (sea ice and land)
runoff between land and sea ice

Exchange grid is between model grids on T-cell

Generates the coupler mosaic containing references to:

- atmos, land and ocean solo mosaic files
- ocean topography files
- exchange grid files

Renamed to *grid_spec.nc* when running a coupled model

Coupled Mosaic

```
atm_mosaic_file = "C96_mosaic.nc" ;
```

```
lnd_mosaic_file = "C96_mosaic.nc" ;
```

```
ocn_mosaic_file = "ocean_mosaic.nc" ;
```

```
ocn_topog_file = "ocean_topog.nc" ;
```

```
aXo_file =
```

```
"C96_mosaic_tile1Xocean_mosaic_tile1.nc",  
"C96_mosaic_tile2Xocean_mosaic_tile1.nc",  
"C96_mosaic_tile3Xocean_mosaic_tile1.nc",  
"C96_mosaic_tile4Xocean_mosaic_tile1.nc",  
"C96_mosaic_tile5Xocean_mosaic_tile1.nc",  
"C96_mosaic_tile6Xocean_mosaic_tile1.nc" ;
```

```
aXI_file =
```

```
"C96_mosaic_tile1XC96_mosaic_tile1.nc",  
"C96_mosaic_tile2XC96_mosaic_tile2.nc",  
"C96_mosaic_tile3XC96_mosaic_tile3.nc",  
"C96_mosaic_tile4XC96_mosaic_tile4.nc",  
"C96_mosaic_tile5XC96_mosaic_tile5.nc",  
"C96_mosaic_tile6XC96_mosaic_tile6.nc" ;
```

```
lXI_file =
```

```
"C96_mosaic_tile1Xocean_mosaic_tile1.nc",  
"C96_mosaic_tile2Xocean_mosaic_tile1.nc",  
"C96_mosaic_tile3Xocean_mosaic_tile1.nc",  
"C96_mosaic_tile4Xocean_mosaic_tile1.nc",  
"C96_mosaic_tile5Xocean_mosaic_tile1.nc",  
"C96_mosaic_tile6Xocean_mosaic_tile1.nc" ;
```

Topography Filter

filter_topo

Multi-pass filtering algorithm to smooth topography

Replaces *filtered* orography variable in orography files

Filtering near intersections requires concurrent loading of all six cubed-sphere tiles

GFS

FV3

Combiner

mppnccombine

Coalesces a grouping from an I/O subset into a single tile file

```
atmos_4xdaily.tile1.nc.0000  
atmos_4xdaily.tile1.nc.0001  
atmos_4xdaily.tile1.nc.0002  
atmos_4xdaily.tile1.nc.0003  
atmos_4xdaily.tile1.nc.0004
```

} atmos_4xdaily.tile1.nc

Always use “-64” option to enable large file support

Re-gridding

fregrid

Remaps data from input mosaic to target mosaic or grid

scalar (T-cell) and vector (A-Grid, bilinear) available

Interpolation algorithms:

conserve_order1¹ (default)

conserve_order2^{1,2}

bilinear³

Reusable *weight* files for common re-mappings

between two grid representations supported

¹ conservation requires cell areas in the presence of land-sea masked quantities

² smoother results, but overshoots may result in negatives in quantities with near-zero values

³ cubic grid to lat-lon only (scalar and vector)

Re-gridding

Total precipitation rate (kg/m²/s)

Downloading

These tools and more are available on GitHub in the NOAA-GFDL domain:
