AFOS-ERA VERIFICATION OF GUIDANCE AND  
LOCAL AVIATION/PUBLIC WEATHER FORECASTS--NO. 23  
(OCTOBER 1994 - MARCH 1995)

Valery J. Dagostaro and J. Paul Dallavalle

1. INTRODUCTION

This office note continues the series of Techniques Development Laboratory (TDL) office notes which present verification results for TDL's automated guidance and National Weather Service (NWS) local forecasts made at Weather Service Forecast Offices (WSFO's). Verification statistics are presented here for the cool season months of October 1994 through March 1995 for maximum/minimum (max/min) temperature, probability of precipitation (PoP), precipitation type, snow amount, cloud amount, surface wind, ceiling height, and visibility. Specific details about the local and objective forecasts and the verifying observations are summarized in Table 1.1. It's important to consider this information when interpreting the verification scores. For example, the objective max/min temperature forecast system is based on calendar day observations for Alaska, but on daytime/nighttime periods for the conterminous U.S. For Alaska, the definitions of the official local max/min temperature forecasts and verifying observations, in turn, differ from those of the guidance. Dagostaro and Dallavalle (1991) provide more specific information about the forecasts, observations, and verification procedure for each weather element.

For this season, the objective guidance was based on forecast equations developed by use of the Model Output Statistics (MOS) technique (Glahn and Lowry 1972) and applied to forecast fields from the Nested Grid Model (NGM) (Hoke et al. 1989) and the Limited-area Fine-mesh Model (LFM) (Gerrity 1977; Newell and Deaven 1981). Additional information about the objective guidance prediction equations is available from the references listed in Table 1.2. Details regarding the local data collection in the conterminous U.S. and Alaska are described briefly in Dagostaro and Dallavalle (1991). For additional information about the local data collection process, see Ruth and Alex (1987). The central data collection and data processing system is described in Dagostaro (1985).

Verification statistics are provided for the 103 stations in the conterminous U.S. and Alaska listed in Table 1.3. The scores are those recommended in the NWS National Verification Plan (National Weather Service 1982). Definitions of the categories used for verification are given in Table 1.4. For the aviation weather elements, we verified the local forecasts associated with the FT issuance times of approximately 0900 and 1800 UTC. Objective guidance for the aviation weather elements, as well as all local and guidance forecasts for the public weather elements, were verified for the 0000 and 1200 UTC forecast cycles. Because verification data or forecast projections for Alaska differ from those of the conterminous U.S., data for the six Alaskan stations were verified separately from those of the conterminous U.S. stations.

For most weather elements, verification results are presented for all stations in the conterminous U.S. combined, followed by results for each of the four NWS regions in the conterminous U.S. and for the Alaska Region. Max/min temperature and PoP scores are presented in Tables 2.1 - 2.12 and 3.1 - 3.12, respectively. Verification results for precipitation type are

shown in Tables 4.1 and 4.2 for stations in the conterminous U.S. only. Similarly, the snow amount verification results shown in Table 5.1 are for the conterminous U.S. only. Tables 6.1 - 6.12 show cloud amount verification scores. For wind speed and direction, objective guidance verification results are presented in Tables 7.1 - 7.12, while the analogous local scores are given in Tables 7.13 - 7.24. Verification results for the 42-h significant wind speed are presented for the conterminous U.S. stations combined and for the Alaska Region in Tables 7.25 - 7.28. For ceiling height, Tables 8.1 - 8.4 contain the objective forecast results for the conterminous U.S. stations combined and for the Alaska Region, while Tables 8.5 - 8.8 contain ceiling height scores for the local forecasts. Tables 9.1 - 9.8 show objective and local visibility forecast results for the conterminous U.S. stations combined and for the Alaska Region.

## 2. SUMMARY (OCTOBER 1994 - MARCH 1995)

During the 1994-95 cool season, the NGM-based MOS was the official objective guidance for stations in the conterminous U.S., and LFM-based MOS was the official objective guidance for stations in Alaska. On October 19, 1994, NGM-based MOS guidance for Alaska became available for max/min temperature and cloud amount (National Weather Service 1995). Precipitation type and snow amount guidance were added on November 16, 1994; wind speed and direction were added on December 7, 1994; ceiling and visibility were added on July 26, 1995; and, finally, PoP was added on August 31, 1995. Although the NGM-based guidance was not the official guidance collected by Alaska's verification software, local forecasts may have been influenced by the new guidance. Please note that for some weather elements, forecast definitions for LFM and NGM MOS differ slightly.

On October 1, 1994, Charleston, West Virginia, was commissioned as an ASOS site. For Denver, Colorado, manual verifying observations were collected at Stapleton Airport prior to February 28, 1995, and ASOS observations were collected at Denver International Airport for the remainder of the cool season. Beginning with the 1994-95 cool season, Dodge City, Kansas, was added to the AFOS-era verification program. Note that Dodge City was commissioned as an ASOS site prior to the 1994-95 cool season. Because the ASOS cloud amount observations are incomplete, we set to missing the observed cloud amount data for the ASOS stations after they were commissioned. Observed cloud amount data were also set to missing for the AEV ASOS sites listed in Table 1.3 that were commissioned prior to the 1994-95 cool season. In addition, snow amount observations were unavailable for ASOS sites.

Dagostaro and Dallavalle (1993) documented a problem that affected the 42-h significant wind verification for stations in the conterminous U.S. For 14 test sites, corrected software was in use for most of the 1994-95 cool season, while the remaining stations installed the corrected software just prior to January 1, 1995. Therefore, for the 42-h significant wind verification, we used only the data collected after the new software was installed. The problem did not affect stations in Alaska; thus, data for the entire season were verified. In addition, the new software corrected problems affecting observations of precipitation type, snow amount (at manual stations only), and precipitation amount (at ASOS stations only) for stations in the conterminous U.S. Analogous to the 42-h wind verification, for verification of these weather elements, we used only the data collected after the new software was installed. Please note that the problems for these weather elements

began in July 1994 and, therefore, did not affect the precipitation type or snow amount verifications for previous cool seasons. The problem with observations of precipitation amount at ASOS sites was accounted for in the 1994 warm season PoP verification.

On January 1, 1995, the format of the hourly surface observations changed. Due to the possible inadvertent use of the old format after January 1 or use of an old version of the data collection software, bad precipitation amount observations were collected after January 1 for some stations. The erroneous precipitation amount observations were eliminated prior to verifying the PoP forecasts for the 1994-95 cool season.

A problem documented in Dagostaro and Dallavalle (1995) that affected the PoP verifications for Alaska was mitigated, but not permanently corrected, by replacing the locally-collected LFM MOS PoP guidance with centrally-archived guidance for different valid periods. Beginning with the 1994-95 cool season, we replaced the locally-collected PoP guidance with centrally-archived values whose valid times matched those of the local forecasts and verifying observations. Specifically, we used the LFM MOS guidance for 12-h periods ending 30-, 42-, and 54-h after 0000 and 1200 UTC. Note, however, that only PoP forecasts for the first half of the cool season were verified due to problems with the verifying precipitation amount observations. After the change in the hourly observation format on January 1, Alaska's data collection software no longer collected the correct precipitation amount observations.

Table 1.1. Forecasts and observations in the NWS verification data.

Weather Element	Type of Data	Data Source <sup>1</sup>	Projections From Forecast Cycle	Forecast Cycle (UTC)	Comments
Max temp	LFM MOS	FMAK1	24, 48 36, 60	0000 1200	Calendar day max temperature forecast for Alaska; guidance no longer available for the conterminous U.S.
	NGM MOS	FWC	24, 48 36, 60	0000 1200	Daytime max temperature forecast.
Local Fst	FP	FP	24, 48 36, 60	0000 1200	Daytime max temperature for all stations. In the conterminous U.S., actual daytime period depends on time zone. For Alaska, forecasts are valid for 12-h periods ending at 30 (42) and 54 (66) hours after 0000 (1200) UTC.
Obs	SAO				Corresponds closely to the local and NGM MOS definitions of the max for all stations.
Min temp	LFM MOS	FMAK1	36, 60 24, 48	0000 1200	Calendar day min temperature forecast for Alaska; guidance no longer available for the conterminous U.S.
	NGM MOS	FWC	36, 60 24, 48	0000 1200	Nighttime min temperature forecast.
Local Fst	FP	FP	36, 60 24, 48	0000 1200	Nighttime min temperature for all stations. In the conterminous U.S., actual nighttime period depends on time zone. For Alaska, forecasts are valid for 12-h periods ending at 30 (42) and 54 (66) hours after 1200 (0000) UTC.
Obs	SAO				Corresponds closely to the local and NGM MOS definitions of the min for all stations.
PoP	LFM MOS	FMAK1	30, 42, 54	0000, 1200	For Alaska, forecasts are for 12-h periods ending at the indicated projections. Guidance for the conterminous U.S. is no longer available.
	NGM MOS	FWC	24, 36, 48	0000, 1200	Forecasts are for 12-h periods ending at the indicated projections.
Local Fst	FP	FP	24, 36, 48	0000, 1200	Same as the guidance. For Alaska, the local forecasts are valid 30, 42, and 54 hours from the forecast cycle.
Obs	SAO				Precipitation amount for 12-h periods that match those of the local forecasts.

Table 1.1. Continued.

Weather Element	Type of Data	Data Source <sup>1</sup>	Projections From Forecast Cycle	Forecast Cycle (UTC)	Comments
Precipitation type <sup>2</sup>	LFM MOS	FMAK1	18, 30, 42	0000, 1200	For Alaska, guidance is for frozen and unfrozen precipitation (freezing is considered unfrozen but is not verified). There is no guidance for the conterminous U.S.
	NGM MOS	FWC	18, 30, 42	0000, 1200	Forecasts are valid at specific hours corresponding to the indicated projections. Guidance is for freezing, frozen, and liquid precipitation (mixed frozen and liquid is considered liquid).
	Local Fcst	MEF	18, 30, 42	0000, 1200	Forecasts of freezing, frozen, and liquid precipitation (mixed frozen and liquid is considered frozen) for all stations. Forecasts are valid at specific hours corresponding to the indicated projections.
Obs	SAO				Obs are collected at the verifying time and $\pm 1$ hour of the verifying time.
Snow amount <sup>2</sup>	LFM MOS				For Alaska, appropriate guidance is not available; no guidance for the conterminous U.S.
	NGM MOS	FWC	24	0000, 1200	Categorical forecasts of snow amount for the 12-h period ending at the indicated projection.
	Local Fcst	MEF	24	0000, 1200	Snow amount forecast in inches for the 12-h period ending at the indicated projection.
Obs	SSM				12-h snow amount.
Cloud amount	LFM MOS	FMAK1	12, 18, 24	0000, 1200	Categorical forecasts of opaque sky cover for Alaska; no guidance for the conterminous U.S.
	NGM MOS	FWC	12, 18, 24	0000, 1200	Categorical forecasts of opaque sky cover.
	Local Fcst	MEF	12, 18, 24	0000, 1200	Categorical forecasts of sky cover.
Obs	SAO				Observed total sky cover (includes thin clouds) at the verifying hour.
Wind speed	LFM MOS	FMAK2	12, 18, 24, 42	0000, 1200	For Alaska, forecasts are valid at specific hours after 0000 or 1200 UTC; no guidance for the conterminous U.S.
	NGM MOS	FWC	12, 18, 24, 42	0000, 1200	Forecasts are valid at the indicated hours after 0000 or 1200 UTC.
	Local Fcst	FT	3, 9, 15	0900, 1800	Aviation terminal forecasts are valid for variable time periods. Forecasts valid for the "projections" at left are verified. Approximate FT issuance times, at left, depend on time zone where station is located.
	MEF		42	0000, 1200	A yes/no forecast of $\geq 22$ kt wind speed valid at the specific hour after 0000 or 1200 UTC.
Obs	SAO				Observed values collected at the stations for the specific hour and $\pm 3$ hours (highest sustained wind) correspond to the valid times of the local aviation terminal forecasts. Observed values corresponding to the 42-h significant wind should be based on 0000 or 1200 UTC, but are erroneously based on the FT issuance time until January 1, 1995 for the conterminous U.S. Verifying obs corresponding to the guidance are from TDL hourly archives.

Table 1.1. Continued.

Weather Element	Type of Data	Data Source <sup>1</sup>	Projections From Forecast Cycle	Forecast Cycle (UTC)	Comments
Wind direction	LM MOS	FMAK2	12, 18, 24	0000, 1200	For Alaska, forecasts are valid at specific hours after 0000 or 1200 UTC; no guidance for the conterminous U.S.
	NGM MOS	FWC	12, 18, 24	0000, 1200	Forecasts are valid at the indicated hours after 0000 or 1200 UTC.
Local Fst	FT	3, 9, 15	0900, 1800	Same as for local aviation terminal forecasts of wind speed.	
Obs	SAO				Observed values collected at the stations for the specific hour correspond to the valid time of the local forecasts. Verifying obs corresponding to the guidance are from TDL hourly archives.
Ceiling height	LM MOS	FMAK2	12, 18, 24	0000, 1200	Categorical value. Definitions of categories match the official definitions of LIFR and IFR, but differ slightly from the official definitions of MVFR and VFR; no guidance for the conterminous U.S.
	NGM MOS	FWC	12, 15, 18, 24	0000, 1200	Categorical value. Definitions of categories match the official definitions of LIFR, IFR, MVFR, and VFR.
Local Fst	FT	3, 6, 9, 15	0900, 1800	Forecasts are converted to categorical values. See wind speed for FT valid times and issuance times.	
Persis	SAO				Persistence observations used for comparison with the local forecasts are collected at the stations and are the latest hourly obs available at the scheduled FT release time. Since March 1987, persistence obs used for comparison with the MOS guidance are from hourly obs taken at 0900 (2100) UTC for the 0000 (1200) UTC cycle. These latter obs are collected at TDL.
Obs	SAO				Observations taken at specific hours. Obs corresponding to the valid times of the local forecasts are collected at the stations. Verifying obs that correspond to the valid times of the MOS guidance are from hourly obs collected at TDL.
Visibility	LM MOS	FMAK2	12, 18, 24	0000, 1200	See ceiling height.
	NGM MOS	FWC	12, 15, 18, 24	0000, 1200	See ceiling height.
Local Fst	FT	3, 6, 9, 15	0900, 1800	See ceiling height.	
Persis	SAO				See ceiling height.
Obs	SAO				See ceiling height.

<sup>1</sup>Data sources are as follows:  
FMAK1, FMAK2 - bulletins contain LFM-based MOS guidance for all weather elements for stations in Alaska; LFM-based MOS guidance for the conterminous U.S. is no longer available.  
FWC - FWC bulletin contains NGM-based MOS guidance for all weather elements for stations in the conterminous U.S. only.  
FP - Coded city forecast (FPU84) bulletin containing official local public weather element forecasts in the conterminous U.S.; data in Alaska are obtained from the FPAK4 bulletin.  
FT - Aviation terminal forecast containing official local forecasts for aviation weather elements  
MEF - Manually entered forecast product containing official local forecasts of some weather elements  
SAO - Surface airways observation containing verifying observations corresponding to local and MOS forecasts for most weather elements  
SSM - Surface synoptic report containing verifying observations of snow amount

<sup>2</sup>Precipitation type and snow amount forecasts are not verified for the warm season months of April through September.

Table 1.2. National Weather Service Technical Procedures Bulletins (TPB's) containing information about MOS guidance.

Geographical Area	Subject	Forecast Model	TPB No.
Conterminous U.S.	max/min temperature	NGM	387

<sup>1</sup>Cloud amount observations were not used and snow amount observations were unavailable after the station was commissioned as an ASOS site.

<sup>2</sup>Precipitation type and snow amount were not verified for this station.

<sup>3</sup>MLB had no data for the cloud amount and 42-h significant wind verifications.

<sup>4</sup>MSY and SHV had no data for the precipitation type and 42-h significant wind verifications.

<sup>5</sup>TCC had no data for the max/min temperature, PoP, and snow amount verifications. Data also were not available for the cloud amount and 42-h significant wind verifications for the 1200 UTC cycle, the local ceiling height, visibility, and surface wind verifications for the FT release time of approximately 0900 UTC, the MOS surface wind verification for the 1200 UTC cycle, and the MOS ceiling height and visibility verifications for the 0000 and 1200 UTC cycles.

<sup>6</sup>LBB and ELP were not included in the local ceiling height, visibility, and surface wind verifications.

<sup>7</sup>LAX was not included in the max/min temperature and PoP verifications.

<sup>8</sup>JNU had no data for the PoP verification.

Table 1.4. Definitions of categories used for verification.

Category	Precipitation Type	Snow Amount* (in)	Cloud Amount	Wind Speed (kt)	Wind Direction (degrees)	Ceiling Height (ft)	Visibility (mi)
1	ZL, ZR, any combination of precipitation types that includes ZL or ZR	<2	CLR, -SCT, -BKN, -OVC, -X	≤12	340-20	≤400	<1
2	IC, IP, IPW, S, SG, SP, SW, any combination of frozen and liquid	2-3	SCT	13-17	30-60	500-900	1-2 3/4
3	L, R, RW	4-5	BKN	18-22	70-110	1000-3000	3-5
4		≥6	OVC, X	23-27	120-150	≥3100	>5
5				28-32	160-200		
6						≥33	210-240
7							250-290
8							300-330

\*Scores based on cumulative snow amount categories of  $\geq 2$ ,  $\geq 4$ , and  $\geq 6$  inches are noted in the verification tables.

Table 2.1. Comparative verification of local and NGM MOS max/min temperature forecasts for 95 stations in the conterminous U.S., 0000 UTC cycle.
