

# Aviation Products from the Localized Aviation MOS Program (LAMP)

Judy E. Ghirardelli

National Weather Service  
Meteorological Development Laboratory

Presented at

New England Aviation Workshop

Gray, ME

May 12, 2009

# Outline

---

- LAMP Overview
- Brief LAMP Verification
- Current Status and Products
- Example of LAMP Application
- Future Plans

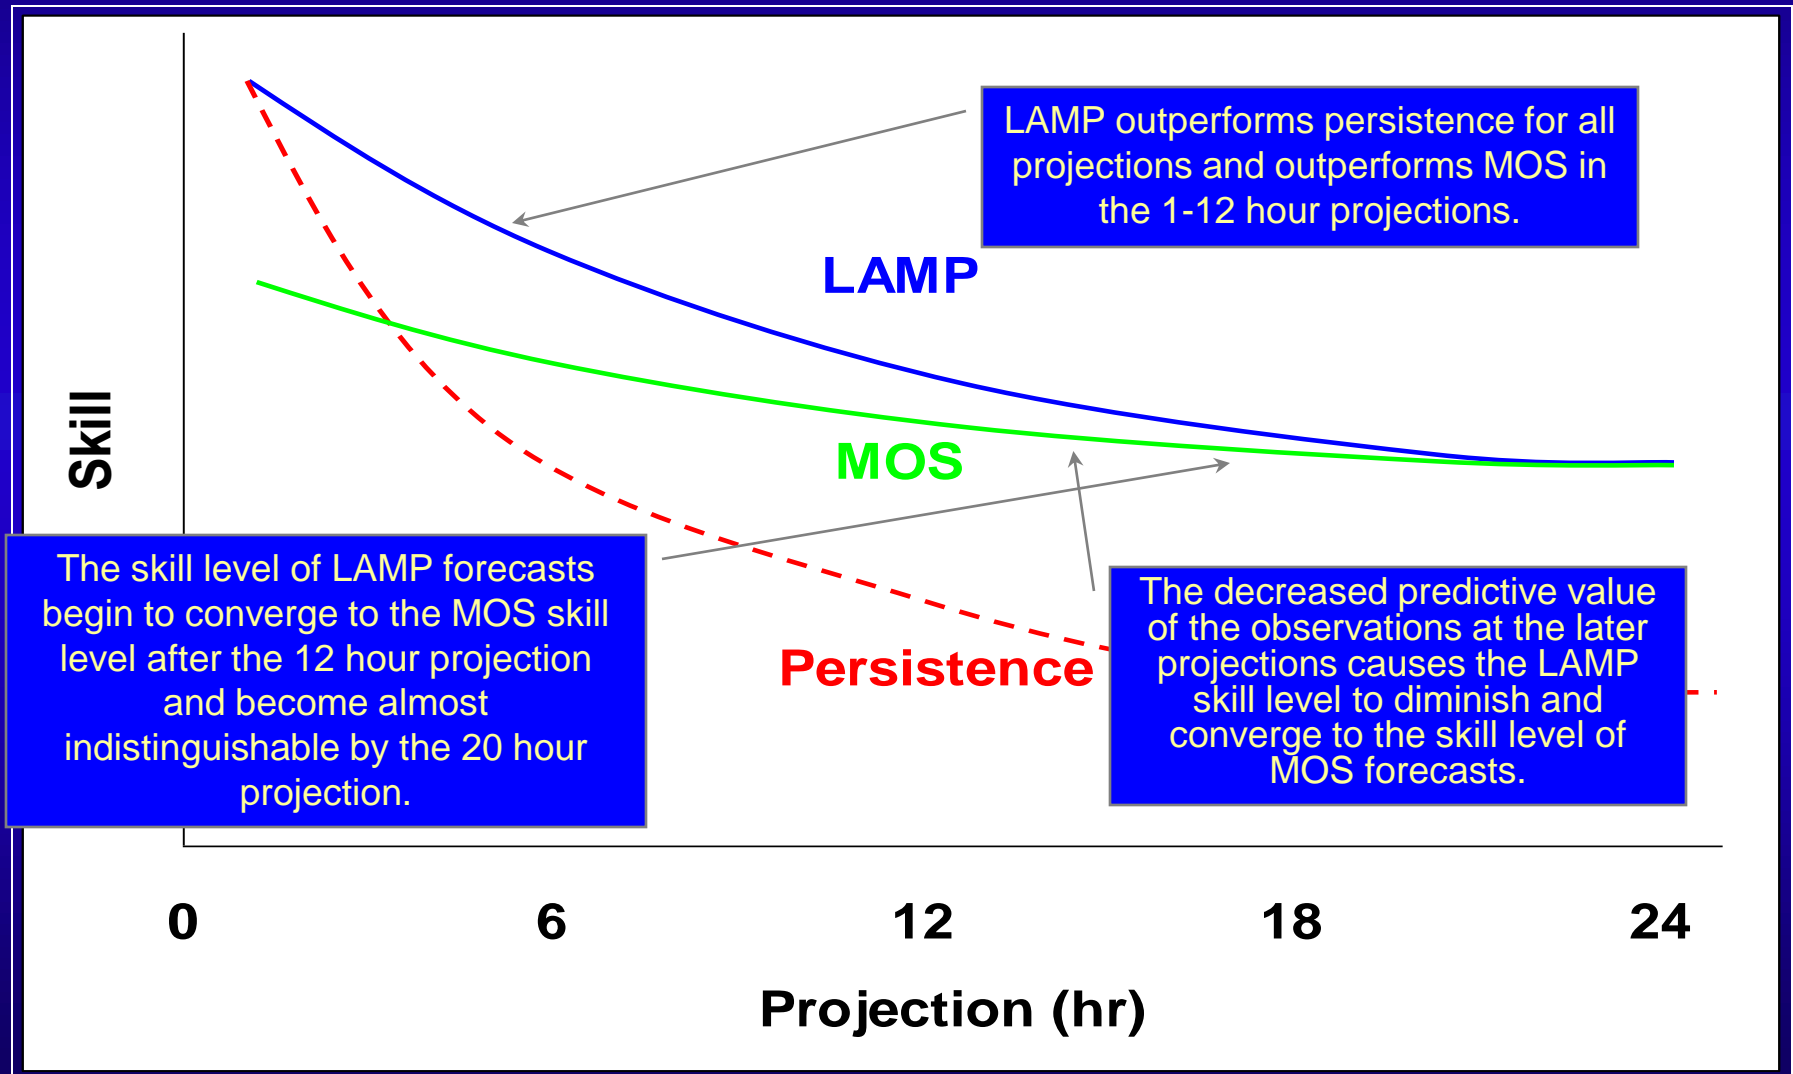

# LAMP Overview

# Localized Aviation MOS Program (LAMP) Background

---

- LAMP is a system of objective analyses, simple models, regression equations, and related thresholds which together provide guidance for sensible weather forecasts
- LAMP acts as an update to GFS MOS guidance
- Guidance is both probabilistic and non-probabilistic
- LAMP provides guidance for aviation elements
- LAMP bridges the gap between the observations and the MOS forecast

# Theoretical Model Forecast Performance of LAMP, MOS, and Persistence

# LAMP Guidance Details

LAMP guidance is in the range of 1- 25 hours in 1 hour projections

- LAMP provides station-oriented guidance for:
  - all LAMP forecast elements ←
  - ~1600 stations
  - CONUS, Alaska, Hawaii, Puerto Rico
- LAMP provides grid-oriented guidance for:
  - Thunderstorms:
    - Probability of thunderstorm occurrence in a 2 hour period in a 20-km grid box
    - Best Category Yes/No of thunderstorm occurrence in a 2 hour period in a 20-km grid box
  - CONUS only
- As of November 13, 2008, LAMP is running 24 times a day (every hour) in NWS operations

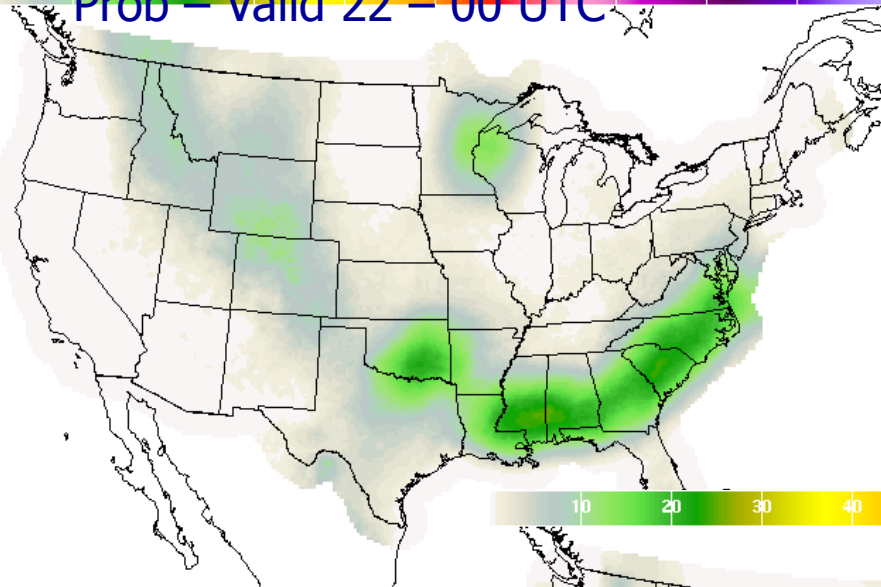

- Temperature and dewpoint
- Wind speed, direction, and gusts
- Probability of precipitation (on hr)
- Probability of measurable precipitation (6- and 12-h)
- Precipitation type
- Precipitation characteristics
- Thunderstorms
- Ceiling height
- Conditional ceiling height
- Total sky cover
- Visibility
- Conditional visibility
- Obstruction to vision

# Example of blending Observations and MOS

# 1-3 hr LAMP Thunderstorm forecast

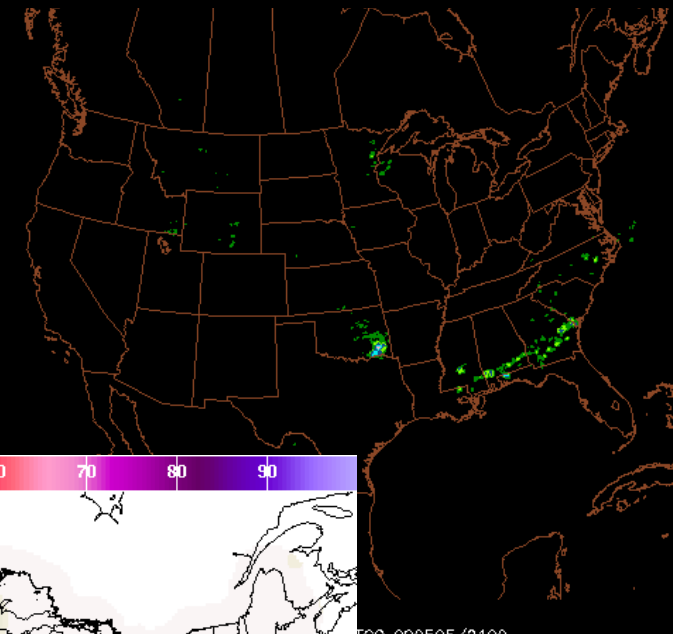

Predictor: 12 UTC MOS Thunderstorm

Prob - Valid 22 - 00 UTC

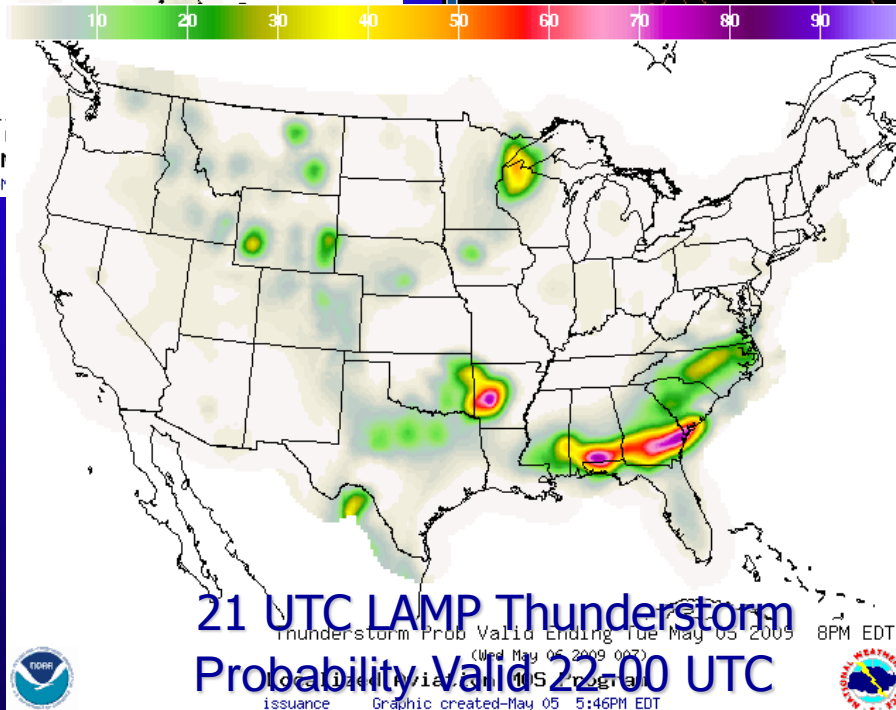

Thunderstorm Prob Val  
(Wed)  
**Localized Aviation I**  
issuance Graphic created-

Predictor: 21 UTC lightning strike data

TGC 090505/2100

**21 UTC LAMP Thunderstorm**  
Probability Valid 22-00 UTC

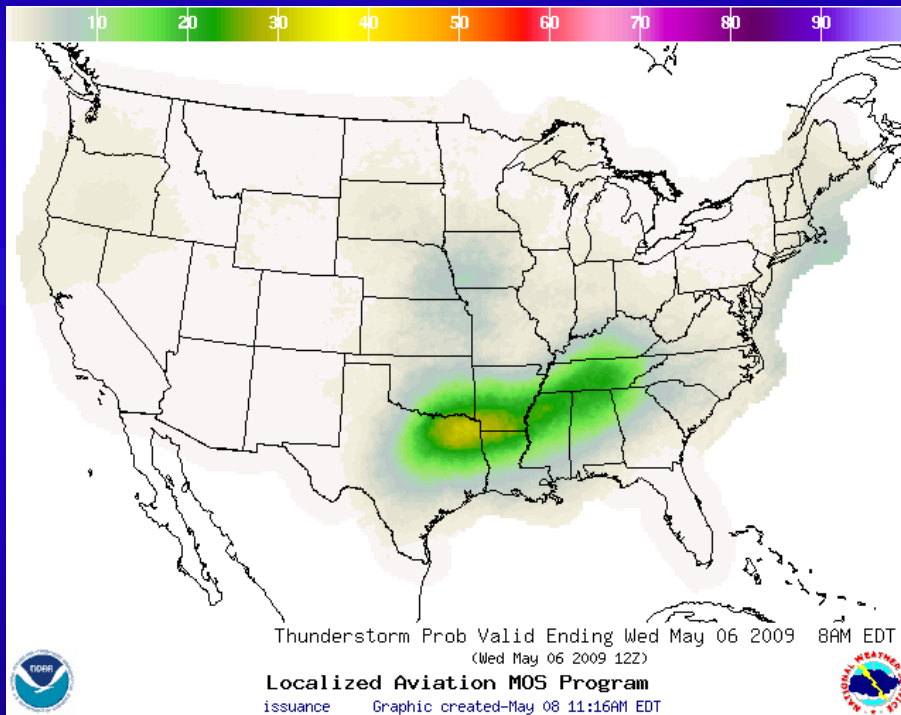

Thunderstorm Prob Valid Ending Tue May 05 2009 8PM EDT  
(Wed May 05 2009 00Z)  
**Localized Aviation I**  
issuance Graphic created-May 05 5:46PM EDT

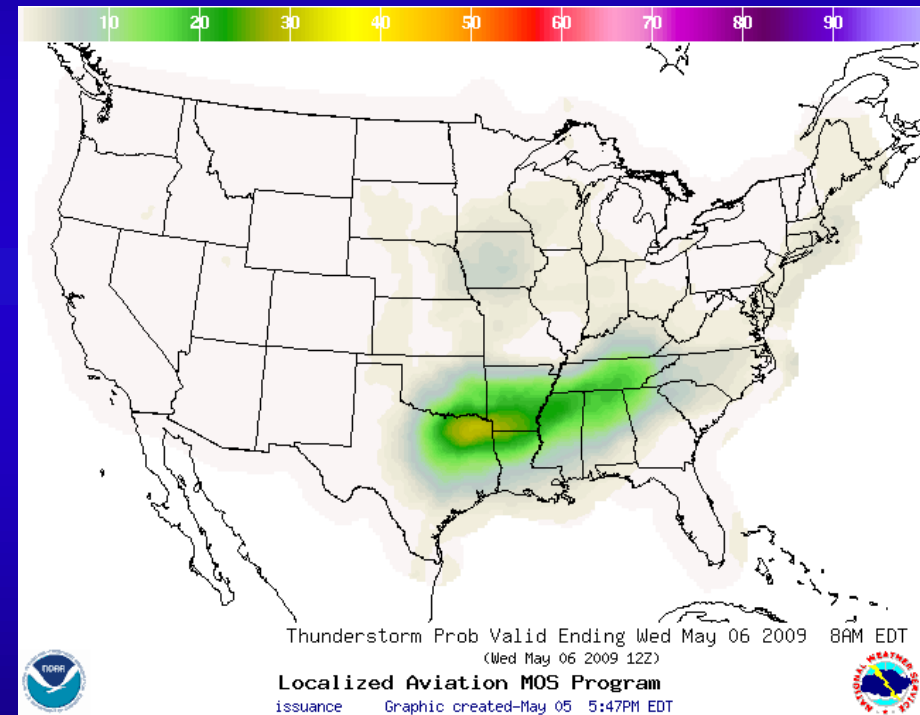

# 13-15 hr LAMP Thunderstorm forecast

12 UTC MOS Thunderstorm Probability  
– Valid 10 – 12 UTC (next day)

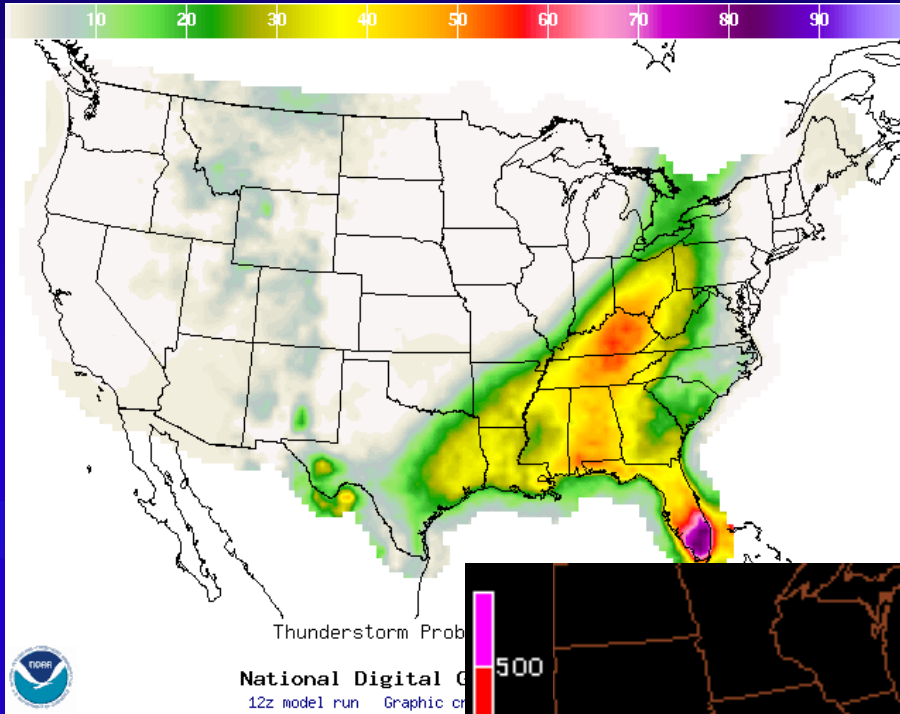

21 UTC LAMP Thunderstorm Probability  
– Valid 10 – 12 UTC (next day)

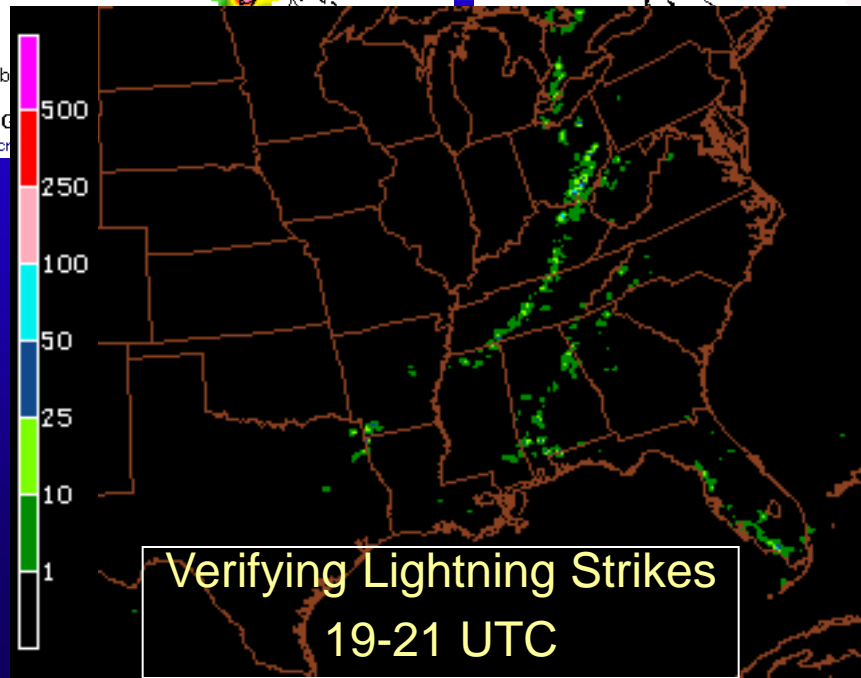

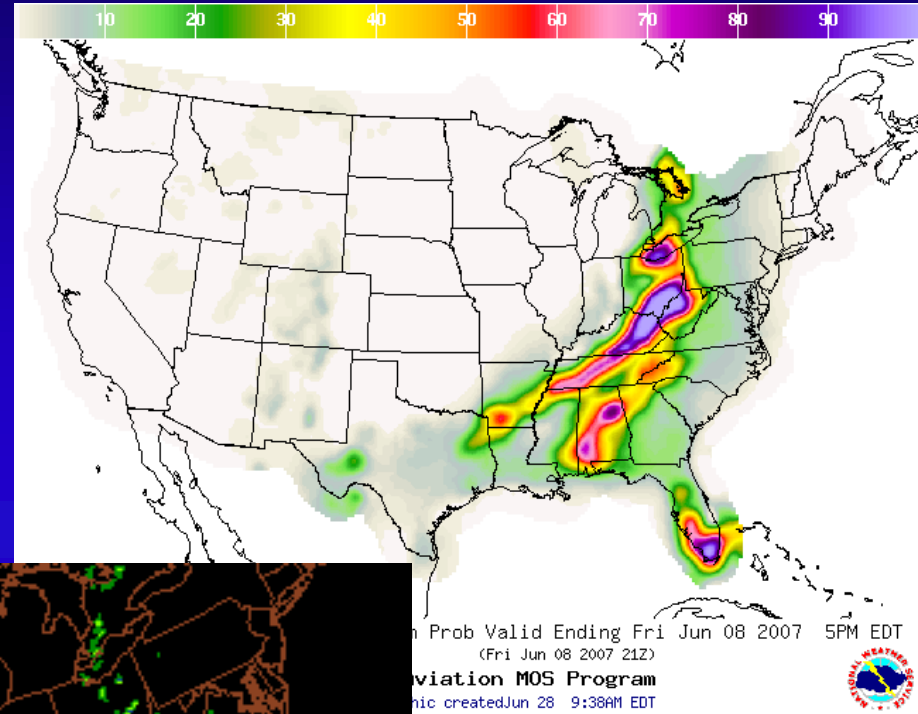

# June 8, 2007

## 12 UTC GMOS - Valid 18-21 UTC

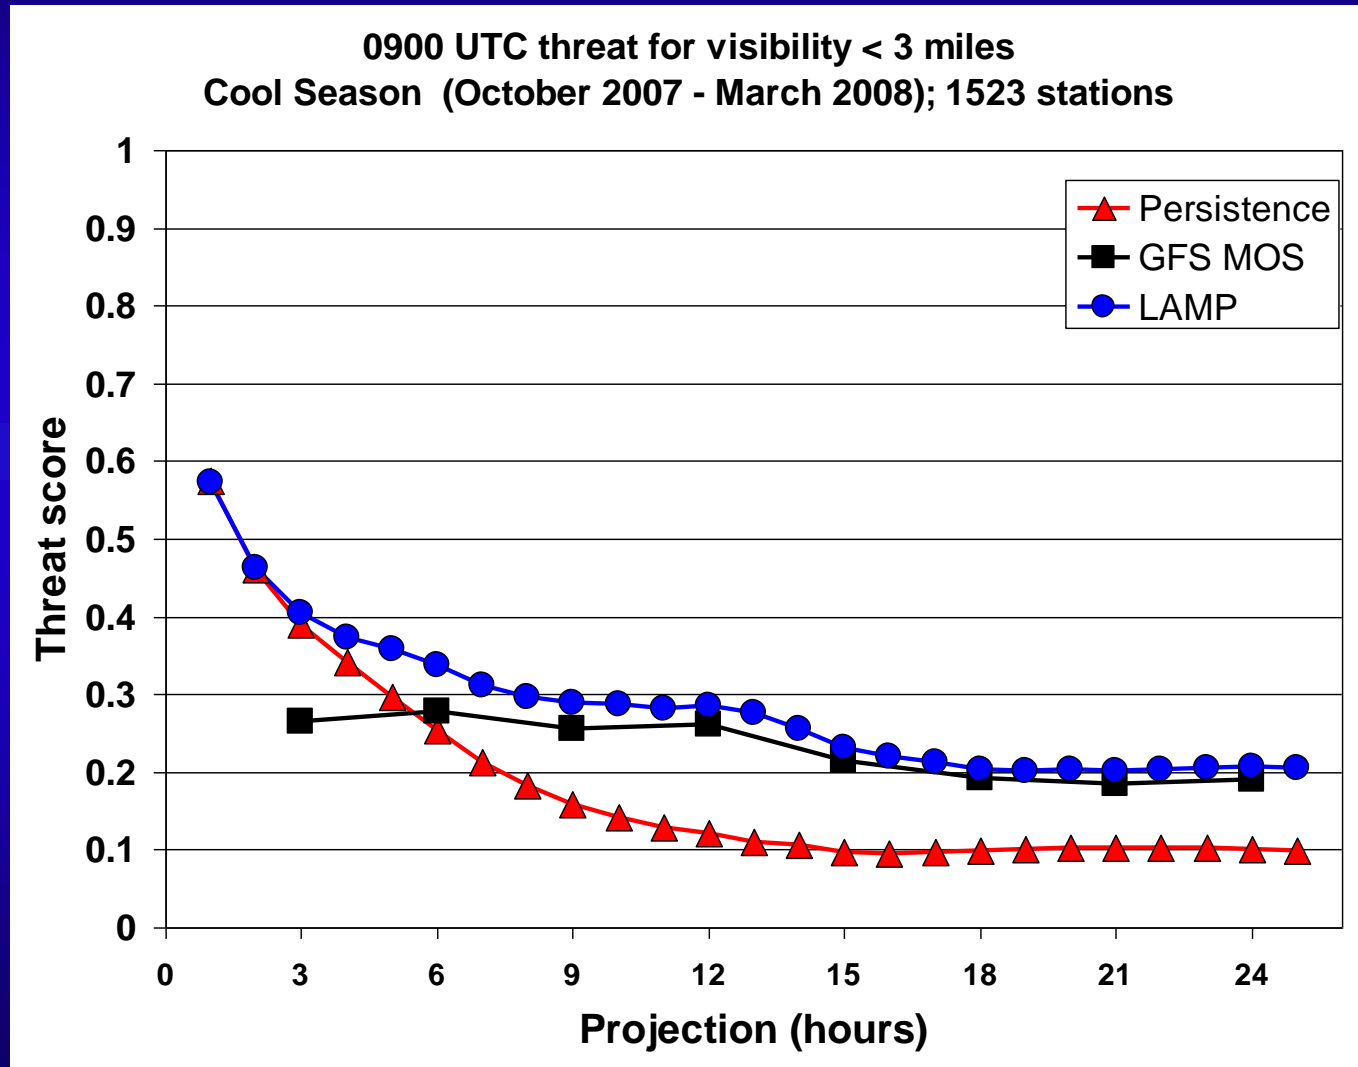

## 18 UTC LAMP - Valid 19-21 UTC

# Brief LAMP Verification

# 0900 UTC LAMP compared to MOS

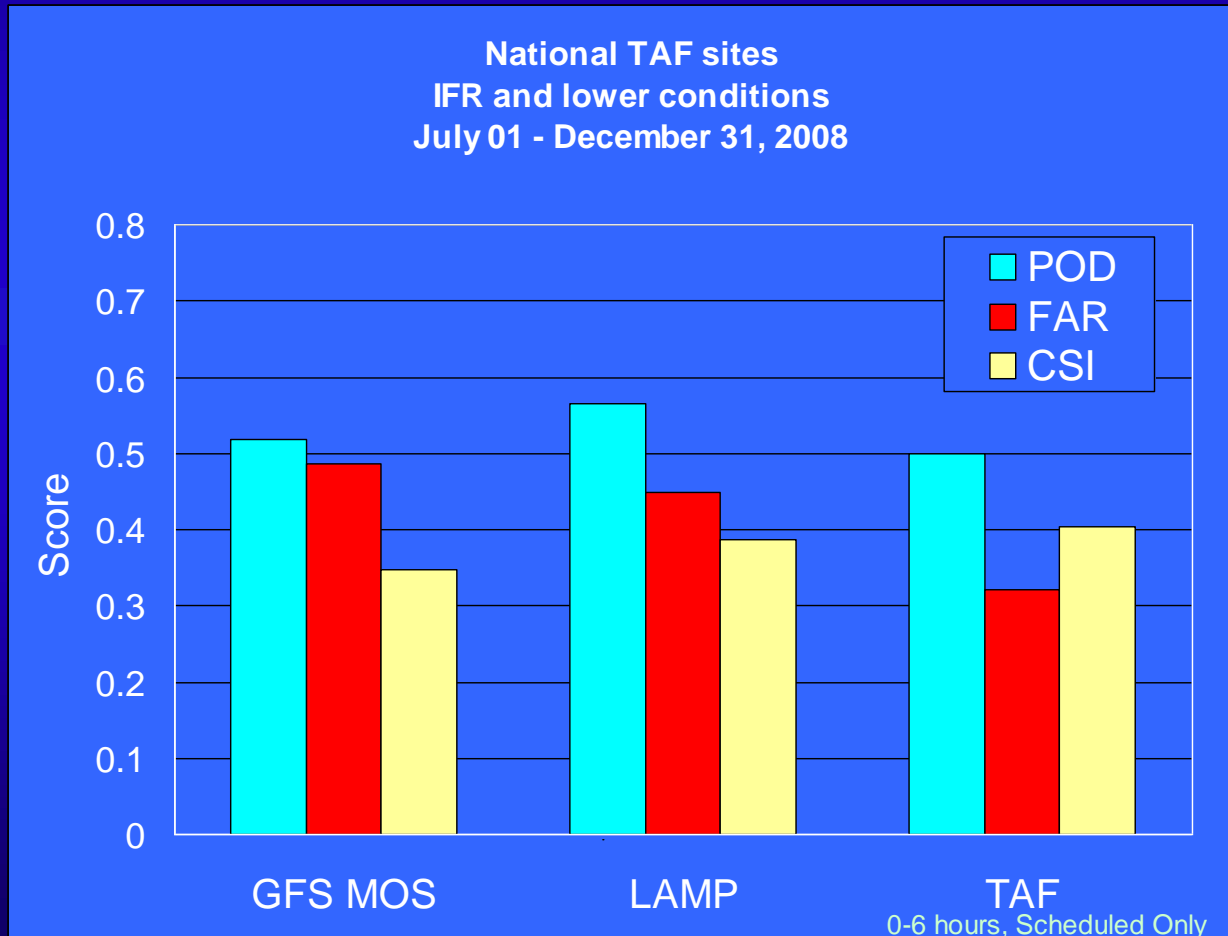

## Categorical Visibility < 3 miles

0900 UTC LAMP verified against 0000 UTC GFS MOS

# Current Results

LAMP in Stats on Demand:

# Current Status and Products

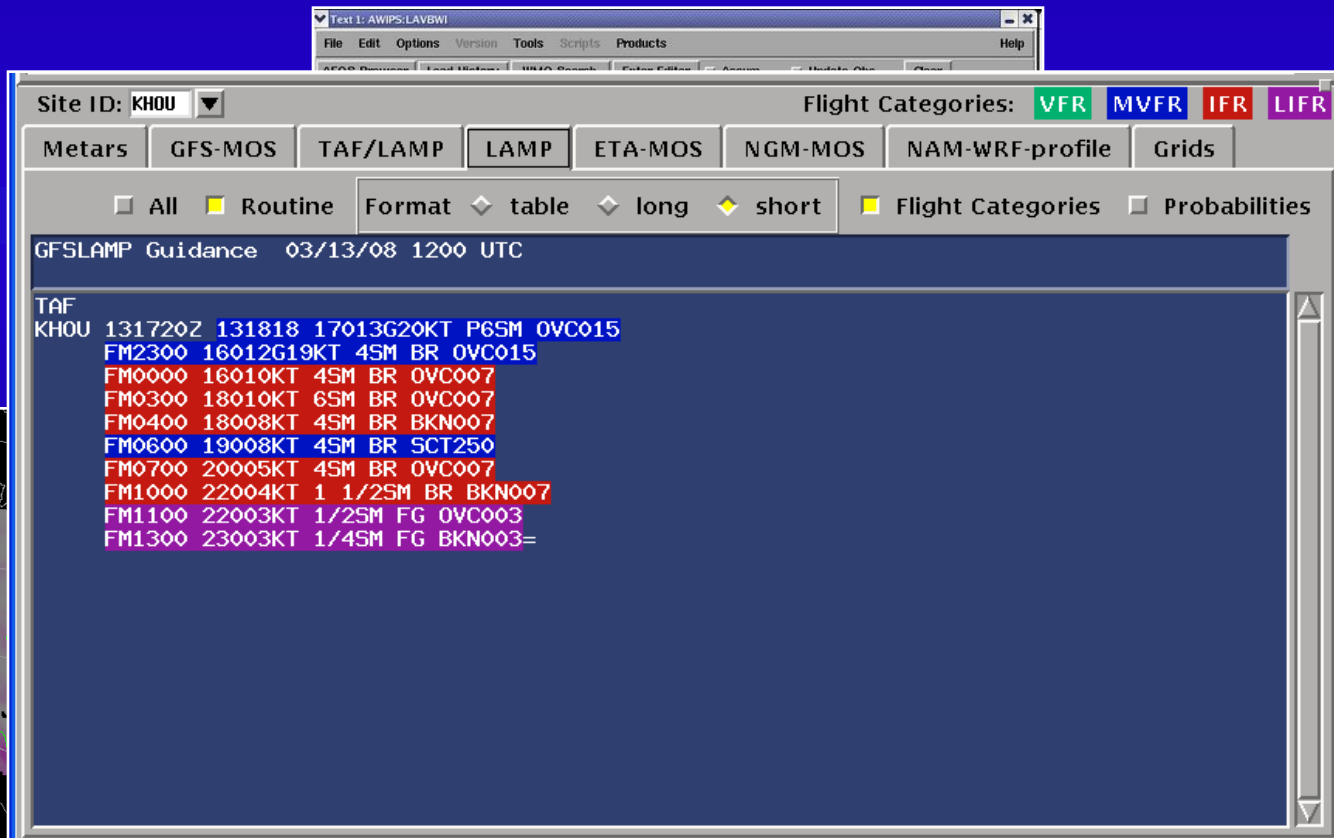

# Current Status and Products

---

- Guidance sent out from NCEP on SBN/NOAAPort and NWS FTP Server
  - ASCII text bulletin
  - BUFR data
  - GRIB2 thunderstorm data
- Available Products:
  - Guidance viewable in AWIPS D2D and AvnFPS
  - Website products:
    - Text bulletins
    - Station plots
    - Meteograms
    - Probability/Threshold images
    - Gridded Thunderstorm images

# Overview of Available AWIPS Products

- Available to NWS forecasters via AWIPS
  - Guidance is viewed as text or graphically by forecasters
  - Guidance is input into software for preparing TAFs

The screenshot displays the AWIPS software interface. At the top, the window title is "Text 1: AWIPS:LAVBWI". Below the menu bar, the "Site ID" is set to "KHOU". The "Flight Categories" are set to "VFR", "MVFR", "IFR", and "LIFR". The "Metars" tab is selected, and the "GFS-MOS" product is chosen. The "Format" is set to "table", and "Flight Categories" is checked. The main display area shows "GFS LAMP Guidance 03/13/08 1200 UTC" and a TAF forecast for KHOU. The TAF forecast is as follows:

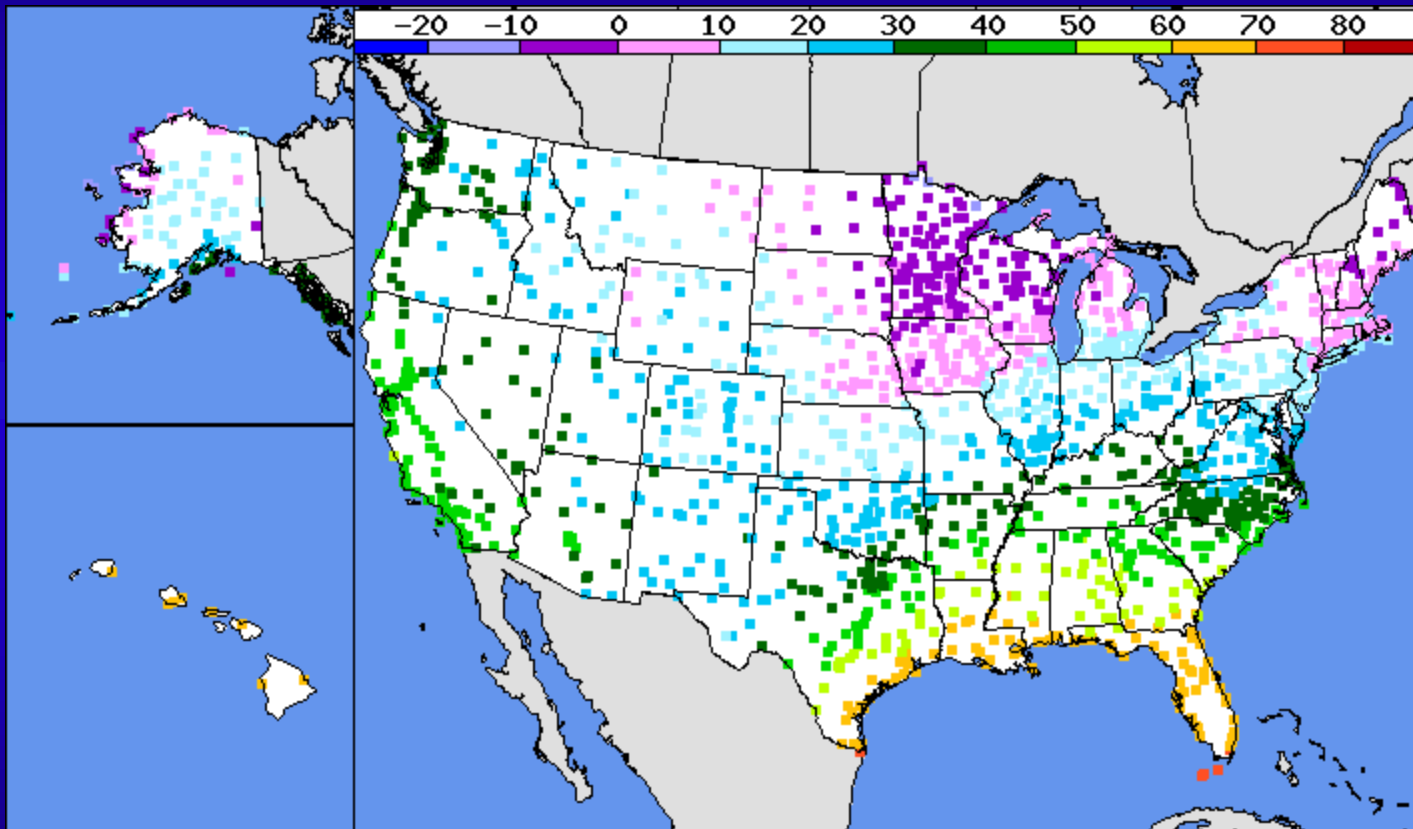

```
TAF
KHOU 131720Z 131818 17013G20KT P6SM OVC015
FM2300 16012G19KT 4SM BR OVC015
FM0000 16010KT 4SM BR OVC007
FM0300 18010KT 6SM BR OVC007
FM0400 18008KT 4SM BR BKN007
FM0600 19008KT 4SM BR SCT250
FM0700 20005KT 4SM BR OVC007
FM1000 22004KT 1 1/2SM BR BKN007
FM1100 22003KT 1/2SM FG OVC003
FM1300 23003KT 1/4SM FG BKN003=
```

# Website: LAMP Station Plots

## Elements

- Flight Category
- Ceiling Height
- Visibility
- Obstruction to Vision
- Total Sky Cover
- Precipitation Type
- Probability of Precipitation
- Wind Speed
- Wind Gust
- Wind Direction
- Temperature
- Dewpoint

12 UTC GFS-LAMP Dewpoint  
19 HOUR FORECAST VALID FOR 02-22-2008 07 UTC

[Click an element name on this slide to see its plot](#)

# Website: LAMP Station Meteograms

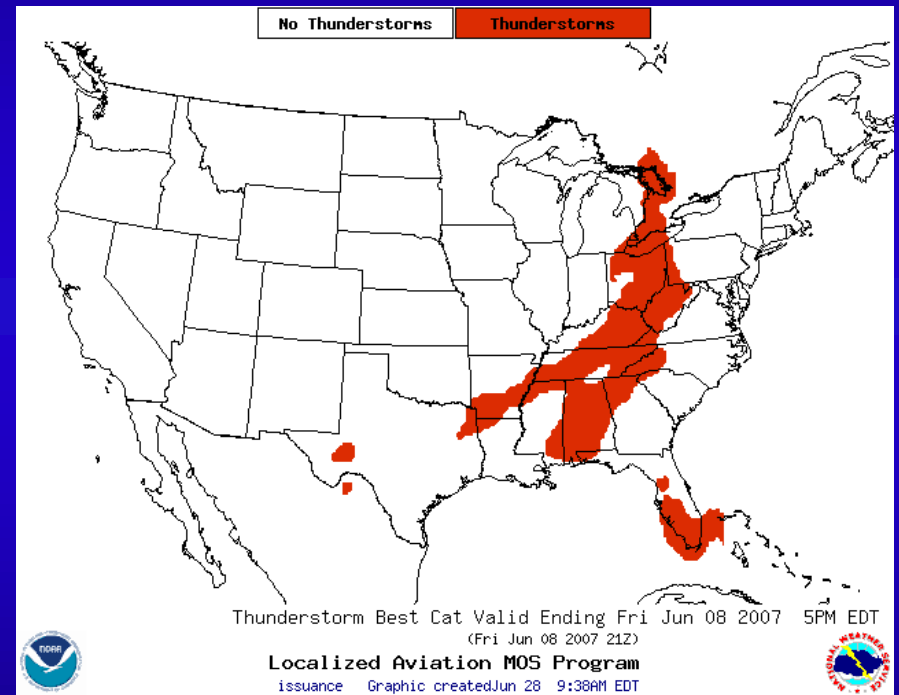

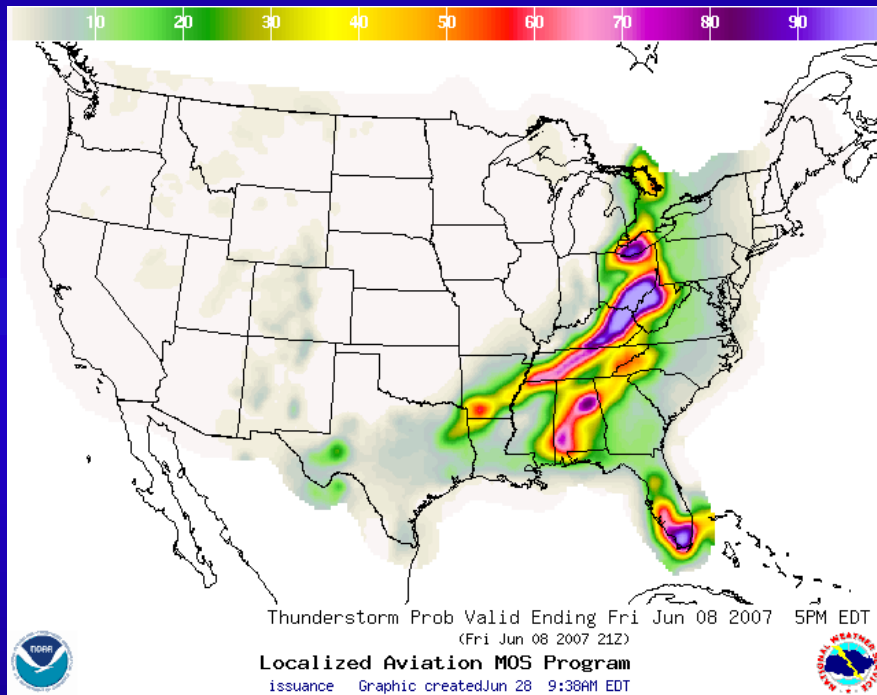

## Features

- Up to 12 displayable LAMP forecast elements
- Real-time verification of current and past cycles
- Verification of completed past cycles including the corresponding GFS MOS forecast

# Website: LAMP Thunderstorms

## Probabilities and Best Category (Y/N)

### All Projections

# New website graphics

---

New LAMP probability/threshold graphics available on LAMP website:

- Goal is to depict the LAMP probabilities and information about the related thresholds so that users can have more information about the probabilities underlying the best category forecasts from LAMP
- One would have more confidence in a chosen category if the probability exceeded the threshold by a large amount, compared to the probability just barely exceeding the threshold.
- Graphics for stations:
  - Line plots show probabilities and thresholds by element
  - Color coded bar charts indicate the confidence in choosing a category by indicating how close the probability was to the threshold
- Aviation probabilities and associated thresholds easily viewable for all LAMP stations and cycles

# LAMP Categorical Forecast Selection Process

The probability of "few" exceeds the threshold value for "few" – therefore LAMP categorical forecast is "few"

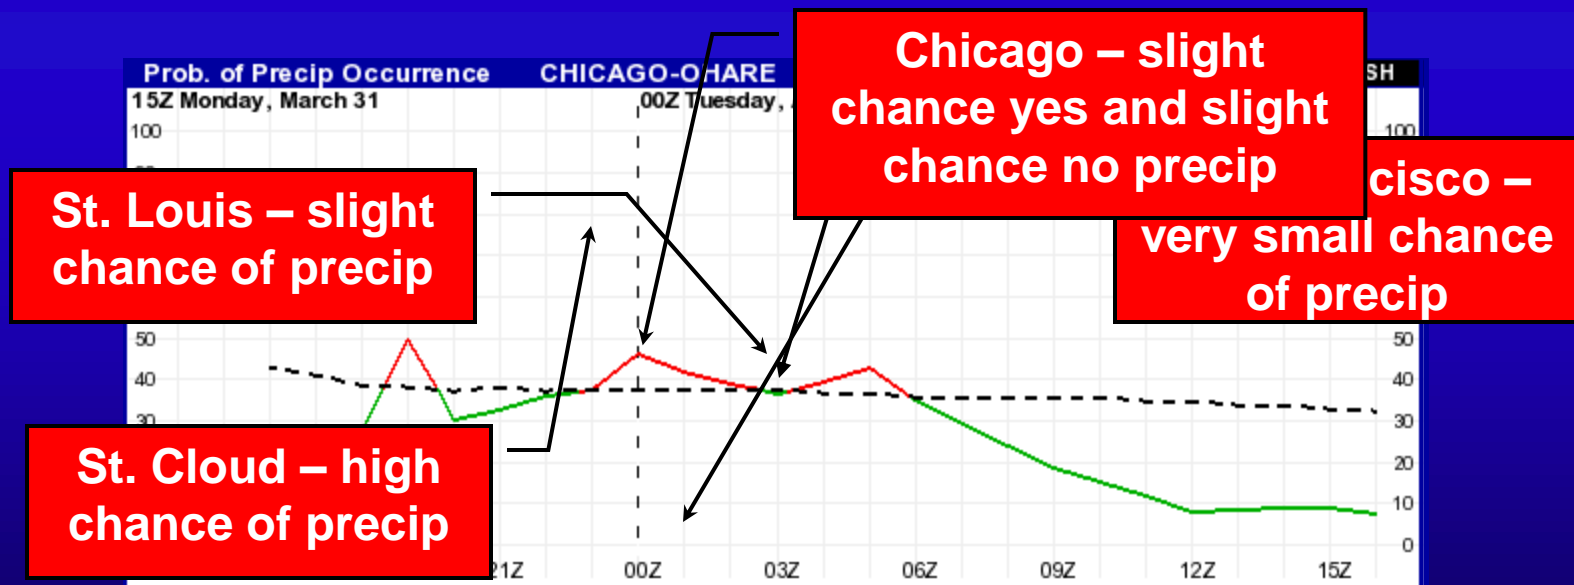

# Depicting Probabilistic Information

Purpose: indicate to user the uncertainty associated with the Best Category forecasts given the probabilistic information

Threshold = dashed black line

Probability < thres = green line

Probability  $\geq$  thres = red line

# LAMP Probabilities and Thresholds for Flight Categories

## Uncertainty Plot Tab – looking at vis ≤ 5 miles

Red=Yes  
Probability exceeds threshold by more than 10%

Orange=Likely  
Probability exceeds threshold but NOT by more than 10%

Yellow = Chance  
Probability is less than 10%

Cyan = No  
Probability is less than 10%

Note that this shows you one condition (e.g., vis ≤ 5 miles). To determine the most likely condition, you should consider rarer conditions first.

# Example of LAMP Application

# LAMP/CCFP Hybrid

---

- Customers can access LAMP guidance and develop products from it.
- Example: Customers are retrieving LAMP thunderstorm grids from NDGD and producing a LAMP/CCFP Hybrid thunderstorm product:

<http://www.lampccfp-hybrid.com/LAMP.swf>

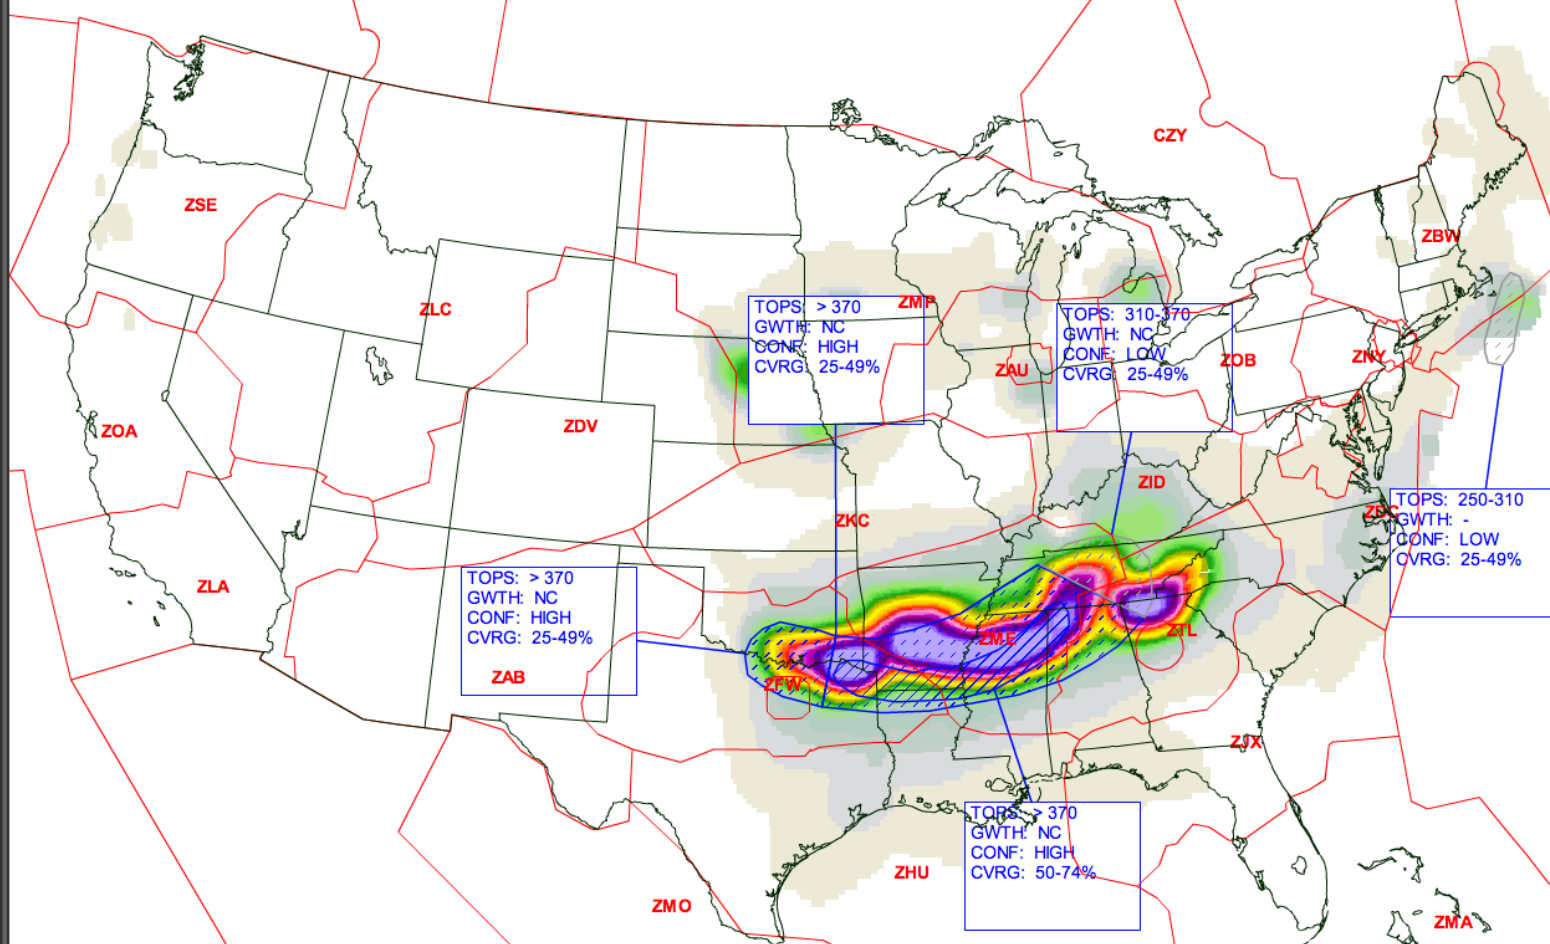

- **Background** (<http://www.avmet.com/LCH/>):  
“The Collaborative Decision Making (CDM) stakeholders chartered the Weather Evaluation Team (WET) to evaluate and recommend an 8-24 hour convective forecast product to be used for operational planning. For the 2009 convective season, the WET proposed to evaluate the use of LAMP as a complement to the CCFP for convective forecasting. The LAMP-CCFP Hybrid webpage is the outcome of this proposal and is currently a prototype product.”

LAMP/CCFP Hybrid

# Future Plans

# Future Plans

---

- Minimize inter-element inconsistencies in anticipation of gridding forecasts
- Gridded LAMP forecasts of:
  - Temperature and dewpoint
  - Winds
  - Probabilities of Ceiling Height
  - Ceiling Height
  - Probabilities of Visibility
  - Visibility

# Future Plans

---

- Redevelop LAMP station guidance of ceiling height and opaque sky cover
- Inter-hour station-based LAMP using SPECI observations
- Convective cloud tops?

# Questions?
